Re: *Petition of MCImetro Access Transmission Services, LLC and Brooks  
Fiber Communications of Tennessee, Inc. for Arbitration of Certain  
Terms and Conditions of Proposed Agreement with BellSouth  
Telecommunications, Inc. Concerning Interconnection and Resale  
Under the Telecommunications Act of 1996*  
Docket No. 00-00309

Dear Mr. Waddell:

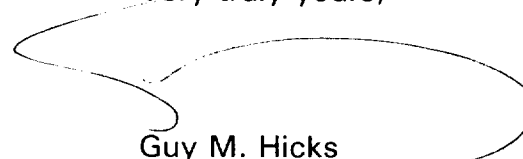

Enclosed are the original and thirteen copies of BellSouth's Rebuttal  
Testimony by the following witnesses:

David A. Coon  
David P. Scollard  
Ronald M. Pate

Cynthia Cox  
W. Keith Milner

Copies of the enclosed are being provided to counsel of record for all parties.

Very truly yours,

Guy M. Hicks

GMH:ch  
Enclosure

1                   BELLSOUTH TELECOMMUNICATIONS, INC.  
2                   REBUTTAL TESTIMONY OF W. KEITH MILNER  
3                   BEFORE THE TENNESSEE REGULATORY AUTHORITY  
4                   DOCKET NO. 00-00309  
5                   December 13, 2000

6

7    Q.    PLEASE STATE YOUR NAME, YOUR BUSINESS ADDRESS, AND  
8           YOUR POSITION WITH BELLSOUTH TELECOMMUNICATIONS,  
9           INC. ("BELLSOUTH").

10

11   A.    My name is W. Keith Milner. My business address is 675 West  
12           Peachtree Street, Atlanta, Georgia 30375. I am Senior Director -  
13           Interconnection Services for BellSouth. I have served in my present  
14           role since February 1996, and have been involved with the  
15           management of certain issues related to local interconnection, resale,  
16           and unbundling.

17

18   Q.    ARE YOU THE SAME W. KEITH MILNER WHO FILED DIRECT  
19           TESTIMONY IN THIS PROCEEDING?

20

21   A.    Yes.

22

23   Q.    WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY BEING  
24           FILED TODAY?

25

1 A. I will respond to portions of the testimony of MCImetro Access  
2 Transmission Services, LLC and MCI WorldCom Communications, Inc.  
3 (collectively referred to as "MCI WorldCom") witnesses Lichtenberg,  
4 Olson, Bomer, and Price with respect to Issues, 5, 8, 11, 15, 19, 29,  
5 37, 56, 59-61, 63-66, 68, 92, 97, and 99 through 103.

6

7 **Rebuttal to the testimony of Ms. Lichtenberg**

8

9 **Issue 5: Should BellSouth be required to provide OS/DA as a UNE?**

10

11 Q. ON PAGE 3 OF HER TESTIMONY, MS. LICHTENBERG SUGGESTS  
12 THAT BELL SOUTH'S METHODS FOR PROVIDING CUSTOMIZED  
13 ROUTING ARE DEFICIENT FOR FOUR REASONS. SHE FIRST  
14 ASSERTS THAT BELL SOUTH'S METHODS DO NOT PROVIDE "A  
15 SIGNALING PROTOCOL THAT IS COMPATIBLE WITH CLECs'  
16 OS/DA [THAT IS, OPERATOR SERVICES AND DIRECTORY  
17 ASSISTANCE] PLATFORMS...." DO YOU AGREE?

18

19 A. No. First of all, FCC's Rule 319(f) makes clear that BellSouth is not  
20 required to unbundle OS/DA where it provides CLECs "customized  
21 routing or a compatible signaling protocol," and BellSouth provides  
22 customized routing in accordance with the FCC's rules.

23

24 Second, as to using a compatible signaling protocol, BellSouth has  
25 tested and makes available various methods for providing Feature

1 Group D signaling in conjunction with customized routing, which is the  
2 "compatible signaling protocol" to which I believe Ms. Lichtenberg is  
3 referring. I described these three methods in my direct testimony.  
4 Thus, BellSouth's work in making a compatible signaling protocol  
5 available to MCI WorldCom has resulted in developing techniques to  
6 provide the signaling Ms. Lichtenberg suggests MCI WorldCom  
7 desires.

8  
9 Q. ON PAGE 3 OF HER TESTIMONY, MS. LICHTENBERG ASSERTS  
10 THAT BELL SOUTH'S CUSTOMIZED ROUTING METHODS DO NOT  
11 PROVIDE "ECONOMICAL TRANSPORT." DO YOU AGREE?  
12

13 A. No. Obviously I cannot know what to Ms. Lichtenberg is economical or  
14 uneconomical. I believe she questions the extent to which BellSouth's  
15 customized routing methods allow for the sharing of transport among  
16 multiple service providers. BellSouth's Line Class Code (LCC) method  
17 allows the sharing of transport between BellSouth's end office switch  
18 and a given OS/DA platform for CLECs who choose the same OS/DA  
19 platform and the same branding or unbranding of calls. BellSouth's  
20 Advanced Intelligent Network (AIN) method for customized routing  
21 allows the sharing of transport between BellSouth's end office switch  
22 and the AIN "hub" which performs the database query. Thus, both  
23 methods allow the sharing of transport and, in my view, provide  
24 "economical transport" within the technical limits of BellSouth's  
25 switches and AIN.

23  
24  
25

Q. ON PAGE 3, MS. LICHTENBERG STATES HER THIRD ASSERTION THAT BELLSOUTH'S CUSTOMIZED ROUTING METHODS CANNOT BE ORDERED ELECTRONICALLY. DO YOU AGREE?

A. No. As BellSouth's witness Pate will discuss, BellSouth completed work (via the Change Control Process) on November 18, 2000, to electronically process orders for the Line Class Code method. To date BellSouth has not developed an electronic ordering process for its AIN method for customized routing based on the apparent lack of interest by CLECs in the use of that method. If a CLEC desires the AIN method, BellSouth will negotiate the development of an electronic ordering process.

Q. ON PAGE 3 OF HER TESTIMONY, MS. LICHTENBERG ASSERTS THAT BELLSOUTH'S CUSTOMIZED ROUTING METHODS HAVE NOT BEEN "TESTED AND PROVEN UNDER REAL-WORLD COMMERCIAL CONDITIONS." DO YOU AGREE?

A. BellSouth has provided its Line Class Code method to a CLEC in Georgia. BellSouth and that CLEC cooperatively tested the functionality of the Line Class Code method. Regarding the AIN method, a technical trial commenced in Louisiana, in August 1998, and was successfully completed in September 1998. A second trial commenced from May 1999 and successfully completed in August

1 1999. BellSouth has completed an enhancement to its AIN Service  
2 Management System (SMS) which will facilitate CLECs' creating and  
3 updating routing information for the CLEC's end users. BellSouth has  
4 completed end-to-end testing (ETET) of this enhancement and placed  
5 a Marketing Service Description (MSD) on its Interconnection website  
6 announcing the availability of this enhancement. The website address  
7 is <http://www.interconnection.bellsouth.com/products/unec.html>. To  
8 summarize, BellSouth has indeed tested its customized routing  
9 methods and found them entirely sufficient for the "real-world" to which  
10 Ms. Lichtenberg alludes. BellSouth stands ready to develop contract  
11 language that will facilitate MCI WorldCom's use of customized routing  
12 functionality. However, whether or not MCI WorldCom is interested in  
13 doing so, BellSouth provides MCI WorldCom and other CLECs  
14 customized routing consistent with the FCC's rules.

15  
16 Q. ON PAGE 4 OF HER TESTIMONY, MS. LICHTENBERG STATES  
17 "ALTHOUGH THIS APPROACH [THAT IS, THE USE OF THE  
18 PSEUDO-CODE TECHNIQUE TO PROVIDE FEATURE GROUP D  
19 SIGNALING] APPEARS TO ROUTE CALLS CORRECTLY, THIS  
20 DOES NOT PROVIDE WORLDCOM WITH AN EFFECTIVE AND  
21 PRACTICAL SELECTIVE ROUTING SOLUTION. ONE MAJOR  
22 PROBLEM IS THAT THE LINE CLASS CODE METHOD AND  
23 PSEUDO-CODE TECHNIQUE WOULD NOT ALLOW WORLDCOM  
24 TO TAKE ADVANTAGE OF THE COMMON TRANSPORT TRUNK  
25 GROUPS ALREADY IN PLACE BETWEEN BELL SOUTH AND

1 OFFICES AND TANDEMS." PLEASE RESPOND.

2

3 A. First, I agree with Ms. Lichtenberg that the pseudo-code technique  
4 provides for proper call routing. Where we disagree is whether  
5 BellSouth's methods allow sufficient use of common trunking. This is  
6 the same issue as I addressed earlier. Here are the reasons why MCI  
7 WorldCom's traffic cannot be placed on the common transport trunk  
8 group that she mentions. First, for technical reasons a single trunk  
9 group cannot use more than one signaling protocol. The common  
10 transport trunk group she mentioned is properly equipped for Feature  
11 Group C signaling protocol rather than Feature Group D. Further, this  
12 trunk group is not used for operator service and directory assistance  
13 traffic since a third signaling protocol referred to as Modified Operator  
14 Services Signaling or "MOSS" is used in conjunction with that traffic.  
15 Thus, due to technical limitations, separate trunk groups are required  
16 for CLECs' OS/DA traffic when the CLEC elects the Line Class Code  
17 method. As I mentioned earlier however, CLECs opting for the same  
18 branding or unbranding of their traffic and whose OS/DA traffic is sent  
19 to the same OS/DA platform can share trunk groups for such traffic  
20 under the Line Class Code method. Also, as I mentioned earlier, the  
21 AIN method allows sharing of the trunk groups between the end office  
22 switch and the AIN hub. Further, CLECs opting for the same branding  
23 or unbranding of their traffic and whose OS/DA traffic is sent to the  
24 same OS/DA platform can likewise share trunk groups between the  
25 AIN hub and the OS/DA platform for such traffic under the AIN method.

1 To summarize, BellSouth designed and implemented both its  
2 customized routing solutions to achieve the highest level of shared  
3 trunking that is technically possible. While Ms. Lichtenberg complains  
4 about the level of trunk group sharing, I note that she has not offered  
5 even a single technical solution that would increase the amount of  
6 trunk group sharing possible with BellSouth's customized routing  
7 methods beyond the technical capabilities of the switches themselves  
8 or BellSouth's AIN platform.  
9

10 Q. ON PAGE 5 OF HER TESTIMONY, MS. LICHTENBERG REPEATS  
11 HER ASSERTION THAT BELL SOUTH'S CUSTOMIZED ROUTING  
12 METHODS CANNOT BE ORDERED ELECTRONICALLY. IS SHE  
13 CORRECT?  
14

15 A. No, for the reasons I set out earlier in this testimony.  
16

17 Q. ON PAGE 5 OF HER TESTIMONY, MS. LICHTENBERG STATES  
18 "THESE ADDED COSTS ARE DIRECTLY RELATED TO THE  
19 INEFFICIENT DESIGN THAT BELL SOUTH CHOSE TO  
20 ACCOMPLISH THE AIN SOLUTION. THE MORE APPROPRIATE  
21 DESIGN WOULD HAVE BEEN NOT AT A FOREIGN SWITCH, BUT  
22 AT THE POINT OF ORIGIN OF THE CALL." DO YOU  
23 AGREE?  
24

25 A. No. With all due respect, it may be that Ms. Lichtenberg does not

1 understand the technical distinctions between BellSouth's Line Class  
2 Code method and its AIN method. AIN uses centralized databases to  
3 determine routing instructions rather than have that same  
4 determination made at the end office switch level. Thus, Ms.  
5 Lichtenberg criticizes the inherent nature of AIN. More importantly,  
6 BellSouth already has a customized routing solution that makes the  
7 determination of how to route OS/DA calls "at the point of origination of  
8 the call." That method is the Line Class Code method which makes  
9 routing determinations at the end office switch (that is, the point of  
10 origination of the call) rather than via a centralized database.

11

12 Q. PLEASE SUMMARIZE YOUR REBUTTAL OF MS. LICHTENBERG'S  
13 CRITICISMS OF BELL SOUTH'S CUSTOMIZED ROUTING  
14 SOLUTIONS.

15

16 A. Ms. Lichtenberg cited four reasons underpinning his mistaken belief  
17 that BellSouth has not provided adequate customized routing. I have  
18 refuted each and every one of these four assertions and I remain  
19 convinced that BellSouth's customized routing solutions work in the  
20 "real-world". Thus, I believe BellSouth should have no obligation to  
21 provide operator services and directory assistance services on an  
22 unbundled basis.

23

24 **Issue 15: When a MCI WorldCom customer served via the UNE-platform**  
25 **makes a directory assistance or operator call, must the ANI-II digits be**

1     **transmitted to MCI WORLDCOM via Feature Group D signaling from the**  
2     **point of origination?**

3

4     Q     DO YOU AGREE WITH MS. LICHTENBERG'S STATEMENT ON  
5           PAGE 7 OF HER TESTIMONY THAT THERE IS THEREFORE NO  
6           DISPUTE CONCERNING THE TECHNICAL FEASIBILITY OF  
7           PROVIDING WHAT WORLDCOM HAS REQUESTED?

8

9     A.     Yes. As I discussed previously in Issue 5 in this testimony, BellSouth  
10           has already performed tests of customized routing alternatives, which  
11           resulted in developing techniques to provide the signaling Ms.  
12           Lichtenberg states MCI WORLDCOM desires. Further, it is my  
13           understanding that MCI WorldCom has already done its own testing of  
14           BellSouth's Line Class Code method of customized routing that  
15           confirms that the three methods I discussed in my direct testimony  
16           work. Those methods provide the transmission of ANI-II digits in  
17           standard Feature Group D format.

18

19           In addition, BellSouth has the AIN based customized routing offering I  
20           discussed earlier, with the database query done via a Nortel DMS 100  
21           hub office rather than at the access tandem. The ANI-II digits are not  
22           passed over to the hub switch from the end office switch because that  
23           leg of the call is considered Feature Group C signaling. BellSouth is  
24           able to convert from conventional Feature Group C signaling to Equal  
25           Access Signaling (that is, Feature Group D) in an end office to Access

1 Tandem arrangement, where the end office switch is a Nortel DMS 100  
2 switch. For the Lucent 5ESS end office switch, BellSouth is able to  
3 convert the signaling to Feature Group D by using direct trunking to the  
4 CLEC's operator services or directory assistance platform. This is due  
5 to the technical limitations inherent in the Lucent 5ESS switch  
6 manufacturers' designs, In both of these cases, ANI-II digits are  
7 successfully provided.

8  
9 To summarize, BellSouth has identified a number of different ways to  
10 accomplish the signaling MCI WorldCom has stated it desires.  
11 BellSouth is willing to incorporate these methods in MCI WorldCom's  
12 interconnection agreement that will allow MCI WorldCom to use  
13 customized routing functionality with Feature Group D signaling  
14 including ANI-II digits. Thus, BellSouth has met its obligation of  
15 providing customized routing to MCI WorldCom. If MCI WorldCom  
16 wants Feature Group D signaling in conjunction with customized  
17 routing, it need simply order it, and BellSouth will provide it.

18  
19 **Issue 19: How should BellSouth be required to route OS/DA traffic to**  
20 **MCI WorldCom's operator services and directory assistance platforms?**

21  
22 Q. MS. LICHTENBERG, ON PAGES 13-14 OF HER TESTIMONY,  
23 SUGGESTS THAT IN ORDER FOR MCI WORLDCOM TO PROVIDE  
24 ITS OWN OS/DA SERVICE EFFICIENTLY FOR ITS CUSTOMERS,  
25 MCI WORLDCOM MUST BE ABLE TO OBTAIN OS/DA TRAFFIC

1 OVER SHARED TRANSPORT VIA A BELL SOUTH TANDEM, AND  
2 OVER DEDICATED TRUNKS THAT CAN OVERFLOW TO SHARED  
3 TRANSPORT AS NEEDED. DO YOU AGREE?  
4

5 A. No. I do not believe that BellSouth has such an obligation since it does  
6 not use such trunking arrangements for its own operator services  
7 traffic. Nevertheless, some sharing of transport is possible where MCI  
8 WorldCom uses BellSouth's customized routing solutions. The AIN  
9 method allows for some sharing of trunk groups between the end office  
10 switch and the AIN "hub". The AIN method also allows CLECs who  
11 choose to send their traffic to the same OS/DA platform to share trunk  
12 groups from the AIN hub to that OS/DA platform. Likewise, the Line  
13 Class Code method allows CLECs opting for the same branding or  
14 unbranding of their OS/DA traffic and who choose to send that traffic to  
15 the same OS/DA platform to share trunk groups from the end office  
16 switch.  
17

18 Further, MCI WorldCom's use of customized routing and the "pseudo  
19 code" method of achieving Feature Group D signaling will allow MCI  
20 WorldCom to route its traffic as it desires including via BellSouth's  
21 tandem switches if desired. BellSouth is entitled to be paid for any  
22 unbundled tandem switching that it provides to MCI WorldCom for the  
23 carriage of MCI WorldCom's operator services or directory assistance  
24 traffic handled in such a manner.  
25

1 Q. HOW DOES BELLSOUTH ROUTE OPERATOR SERVICES AND  
2 DIRECTORY ASSISTANCE TRAFFIC FOR ITS OWN END USER  
3 CUSTOMERS?  
4

5 A. BellSouth routes its operator services or directory assistance traffic  
6 directly to a BellSouth Traffic Operator Position System (TOPS)  
7 platform rather than via a tandem switch. The operator services or  
8 directory assistance end office functions offered by BellSouth require  
9 dedicated trunk groups from BellSouth end offices to the TOPS  
10 platform.  
11

12 Finally, BellSouth does not overflow its operator services or directory  
13 assistance traffic. However, as I mentioned earlier, if MCI WorldCom  
14 elects to use customized routing and the "pseudo code" method of  
15 achieving Feature Group D signaling, MCI WorldCom can acquire  
16 unbundled tandem switching from BellSouth and route MCI  
17 WorldCom's operator services and directory assistance traffic in the  
18 manner MCI WorldCom says it prefers.  
19

20 Q. ON PAGE 10 OF HER TESTIMONY, MS. LICHTENBERG STATES  
21 "SECOND, BELLSOUTH MUST, AT WORLDCOM'S OPTION,  
22 PROVIDE DEDICATED TRANSPORT FOR THIS TRAFFIC, USING A  
23 COMPATIBLE SIGNALING PROTOCOL FROM THE POINT OF  
24 ORIGINATION." PLEASE COMMENT.  
25

1 A. BellSouth stands ready to fulfill MCI WorldCom's request. First,  
2 BellSouth's Line Class Code method uses dedicated trunking from the  
3 end office switch (that is, her "point of origination") and the CLEC's  
4 choice of OS/DA platform. Second, BellSouth can accommodate MCI  
5 WorldCom's choice of "compatible signaling protocol" [that is, Feature  
6 Group D] via the pseudo-code technique I discussed earlier.

7  
8 Q. ON PAGE 11 OF HER TESTIMONY, MS. LICHTENBERG STATES  
9 "IT IS TECHNICALLY FEASIBLE FOR BELL SOUTH TO CONVERT  
10 ITS OS/DA SIGNALING PROTOCOL AT ITS END OFFICES SO  
11 THAT OS/DA SIGNALING CAN BE SENT OVER SHARED  
12 TRANSPORT." IS SHE CORRECT?

13  
14 A. No. It is the pseudo-code technique discussed earlier that converts  
15 from one signaling protocol to another. This function can only be done  
16 at a tandem switch, not an end office switch. Therefore, Ms.  
17 Lichtenberg's statement is incorrect. However, BellSouth is not  
18 opposed to providing the pseudo-code technique to MCI WorldCom  
19 from BellSouth's tandem switches. Next she opines that "possible  
20 ways" to do this signaling protocol conversion are to modify the equal  
21 access tables in BellSouth's switches and use an AIN solution at the  
22 end office switch level rather than at the AIN hub. As I stated in my  
23 direct testimony, BellSouth chose the AIN hub architecture over the  
24 AIN end office architecture to provide a solution that would work in  
25 every end office switch whether it was AIN-capable or not. I believe

1 MCI WorldCom would prefer a solution that works in all rather than  
2 only part of BellSouth's end office switches. Further, the AIN hub  
3 solution allows for the sharing of trunk groups between the end office  
4 switch and the AIN hub and Ms. Lichtenberg has repeatedly expressed  
5 MCI WorldCom's desire for shared trunking.

6  
7 Q. MS. LICHTENBERG, ON PAGE 11 OF HER TESTIMONY, ASSERTS  
8 THAT MCI WORLDCOM MUST BE ABLE TO USE ITS OWN OS/DA  
9 PLATFORM. DO BELL SOUTH'S CUSTOMIZED ROUTING  
10 METHODS ALLOW FOR SUCH ROUTING OF OS/DA TRAFFIC TO  
11 THE CLEC'S CHOICE OF OS/DA PLATFORM?

12  
13 A. Yes. BellSouth stands ready to provide either its Line Class Code  
14 method or its AIN method to MCI WorldCom or any other CLEC. Both  
15 methods allow for the routing of traffic to the CLEC's choice of OS/DA  
16 platform. Further, BellSouth has identified a number of different ways  
17 to accomplish the signaling (that is, Feature Group D) MCI WorldCom  
18 has stated it desires. If MCI WorldCom wants to use this signaling  
19 protocol in conjunction with its use of customized routing, MCI  
20 WorldCom is free to do so. MCI WorldCom need only make such a  
21 request of BellSouth and BellSouth will provide it.

22  
23 BellSouth's Line Class Code method and AIN methods allow for the  
24 sharing of trunks as I have discussed. I believe this to be the sharing  
25 of trunk groups that MCI WorldCom says it wants. Finally, If MCI

1 WorldCom wants to use its own OS/DA platform, it is free to do so and  
2 either of BellSouth's customized routing methods will accommodate  
3 such.  
4

5 **Issue 101: Is BellSouth required to provide shared transport in**  
6 **connection with the provision of custom branding? Is MCI WorldCom**  
7 **required to purchase dedicated transport in connection with the**  
8 **provision of custom branding?**  
9

10 Q. MS. LICHTENBERG CLAIMS ON PAGE 19 OF HER TESTIMONY  
11 THAT "BOTH BELL ATLANTIC AND SBC HAVE DEVELOPED THE  
12 CAPABILITY TO PROVIDE BRANDING FROM OS/DA CALLS USING  
13 SHARED TRANSPORT." WHAT IS YOUR RESPONSE?  
14

15 A. While I cannot speak for Bell Atlantic and SBC, the Line Class Code  
16 method for providing customized routing requires unique translations in  
17 the end office switch to be made at the trunk group level. This means  
18 that any one trunk group can only be assigned one unique brand and  
19 all traffic received over that trunk group will first be directed to the  
20 unique brand before further processing of the call by the chosen  
21 operator services platform. In the alternative, a single trunk group can  
22 be shared by multiple CLECs who elect their customers' calls to be  
23 unbranded or to be branded in the same way. This is an inherent  
24 technical requirement imposed by the switch manufacturers' design  
25 decisions regarding how Line Class Code translations are made.

1  
2  
3  
4  
5  
6  
7  
8  
9  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24  
25

However, as I discussed earlier, BellSouth's AIN method of providing customized routing allows the use of shared trunk groups between the end office switch and the AIN hub switch. This appears to me to satisfy what MCI WorldCom is asking for. As I discussed earlier, shared transport from the AIN hub to MCI WorldCom's OS/DA platform is not appropriate since it is only MCI WorldCom's traffic that will be sent to MCI WorldCom's OS/DA platform. Thus, from BellSouth's AIN hub to MCI WorldCom's OS/DA platform, transport dedicated to MCI WorldCom is entirely appropriate.

**Rebuttal to the testimony of Mr. Price**

**Issue 8: Should UNE specifications include non-industry standard, BellSouth proprietary specifications?**

- Q. WHAT IS BELLSOUTH'S POSITION ON THIS ISSUE?
- A. Although industry standards provide useful guidance for the provision and maintenance of UNEs, there are no industry standards at present for every UNE. BellSouth has developed standards in cases where no industry standard exists which should be incorporated into the parties' interconnection agreement.
- Q. WHAT IS YOUR UNDERSTANDING OF THE DISAGREEMENT

1 BETWEEN MCI WORLDCOM AND BELL SOUTH

2  
3 A. My reading of Mr. Price's testimony beginning on page 17 is that the  
4 disagreement is limited to whether BellSouth's Technical Reference  
5 73600 (TR73600) should be included as one specification for  
6 unbundled loops. In the absence of industry standards for unbundled  
7 loops, BellSouth has developed definitions of unbundled loops and has  
8 given CLECs, including MCI WorldCom, access to its technical  
9 document via BellSouth's Internet website. TR 73600 provides details  
10 as to what BellSouth offers and how BellSouth's unbundled loops are  
11 related to any existing industry standards where industry standards  
12 exist.

13  
14 Q. COULD AN INDUSTRY STANDARD ADEQUATELY COVER THE  
15 TECHNICAL ASPECTS OF BELL SOUTH'S UNBUNDLED LOOP  
16 OFFERINGS?

17  
18 A. I do not believe so. For example, only BellSouth can articulate what its  
19 unbundled loops were designed to do. In this sense, documents such  
20 as TR73600 explain BellSouth's "vocabulary" regarding its unbundled  
21 loop offering such that readers, despite differing terminology, will  
22 understand what the buyer receives when purchasing a given type  
23 unbundled loop.

24  
25 **Issue 29: Should calls from MCI WorldCom customers to BellSouth**

1 customers served via Uniserve, Zipconnect, or any other similar service,  
2 be terminated by BellSouth from the point of interconnection in the  
3 same manner as other local traffic, without a requirement for special  
4 trunking?

5

6 Q. ON PAGE 31 OF HIS TESTIMONY, MR. PRICE SUGGESTS THAT IN  
7 THOSE AREAS WHERE BELL SOUTH HAS DEPLOYED UNISERV®  
8 SERVICE, THE DESIGN HAS REQUIRED MCI WORLDCOM TO  
9 INSTALL NEW TRUNK GROUPS FROM MCI WORLDCOM'S  
10 OPERATOR SERVICES PLATFORM TO THE BELL SOUTH TOPS  
11 PLATFORM THEREBY INCREASING MCI WORLDCOM'S COST OF  
12 DOING BUSINESS TO SUPPORT A BELL SOUTH SERVICE FOR  
13 WHICH BELL SOUTH COLLECTS THE REVENUE. PLEASE  
14 COMMENT.

15

16 A. Because BellSouth UniServ® service utilizes operator services  
17 switching functionality, MCI WorldCom must bring its own facilities, or  
18 lease facilities from BellSouth, to BellSouth's Traffic Operator Position  
19 System (TOPS) platform in order for MCI WorldCom customers to  
20 reach BellSouth's UniServ® service customers. This is consistent with  
21 what BellSouth and other telecommunications carriers are required to  
22 do.

23

24 Mr. Price finds fault with service design decisions made years ago for  
25 BellSouth's UniServ®. It appears that what MCI WorldCom really

1 wants is to be treated differently than the way BellSouth treats itself  
2 and other carriers. For example, by purporting to relieve MCI  
3 WorldCom of establishing trunks to points other than the Point of  
4 Interconnection, MCI WorldCom apparently seeks to avoid having to  
5 establish a trunk group to the TOPS platform for the routing of its  
6 operator services or directory assistance traffic. Routing operator  
7 services and directory assistance traffic directly to the TOPS platform  
8 is precisely the manner in which BellSouth routes such traffic for its  
9 customers, and MCI WorldCom should do the same.  
10

11 Q. ON PAGES 32 OF HIS TESTIMONY, MR. PRICE STATES THAT  
12 REQUIRING MCI WORLDCOM TO DELIVER UNISERV® CALLS TO  
13 BELL SOUTH'S OPERATOR SERVICES SWITCH IS IN VIOLATION  
14 OF THE PROVISIONS OF THE TELECOMMUNICATIONS ACT AND  
15 THE FCC'S LOCAL COMPETITION ORDER WHICH ALLOW MCI  
16 WORLDCOM TO INTERCONNECT AT ANY TECHNICALLY  
17 FEASIBLE POINT. DO YOU AGREE?  
18

19 A. No. What Mr. Price suggests is that MCI WorldCom be free to  
20 interconnect at any point within BellSouth's network for access to any  
21 service BellSouth offers anywhere. I believe one simple example is  
22 sufficient to prove the fallacy of Mr. Price's position. Under Mr. Price's  
23 proposal, MCI WorldCom should be able to interconnect at BellSouth's  
24 directory assistance platform to acquire unbundled loops or resold  
25 services. Obviously, BellSouth cannot provide to MCI WorldCom what

1 it doesn't have. So, despite Mr. Price's complaints, BellSouth has  
2 violated neither the Act nor the FCC's rules regarding network  
3 interconnection by requiring that MCI WorldCom gain access to  
4 customers using BellSouth's UniServ® service the same way as does  
5 BellSouth and other local service providers.

6  
7 **Issue 68: Should BellSouth require that payments for make-ready work**  
8 **be made in advance?**

9  
10 Q. ON PAGE 67 OF HIS TESTIMONY, MR. PRICE SUGGESTS THAT A  
11 PRE-PAYMENT REQUIREMENT WOULD DELAY THE WORK AND  
12 WOULD NOT BE COMMERCIALY REASONABLE. DO YOU  
13 AGREE?

14  
15 A. No. MCI WorldCom should be required to pay in advance for any work  
16 MCI WorldCom requests BellSouth to perform, as do other CLECs that  
17 have signed BellSouth's standard license agreement. BellSouth  
18 should not be required to finance MCI WorldCom's business plans. It  
19 is not unusual for contractors to require payment in advance.  
20 Furthermore there is no harm to MCI WorldCom, given MCI  
21 WorldCom's representation that it will pay BellSouth invoices promptly  
22 in any event. MCI WorldCom should include in its planning process  
23 the time required for BellSouth to perform any needed make-ready  
24 work to accommodate MCI WorldCom's needs. BellSouth completes  
25 its work in a satisfactory manner in the overwhelmingly number of

1 cases. For example, of 80 make-ready jobs undertaken thus far in  
2 Tennessee in 2000, all were completed satisfactorily and none resulted  
3 in a complaint about the process.  
4

5 **Issue 96: Should BellSouth be required to give written notice when a**  
6 **central office conversion will take place before midnight or after 4 a.m.?**  
7

8 Q. ON PAGE 72 OF HIS TESTIMONY, MR. PRICE REITERATES MCI's  
9 POSITION THAT MCI RECEIVE WRITTEN NOTICE IN THE EVENT  
10 THAT A CENTRAL OFFICE CONVERSION IS EXPECTED TO TAKE  
11 PLACE AT ANOTHER TIME THAN SCHEDULED. PLEASE  
12 COMMENT.  
13

14 A. In some cases central office conversions consist of upgrades to  
15 existing hardware or software. In other cases, conversions consist of  
16 replacement of the entire central office switch. Central office  
17 conversions are carefully coordinated and are not a consequence of  
18 local competition. As I stated in my direct testimony, BellSouth agrees  
19 to provide notification to CLECs, including MCI WorldCom, concerning  
20 central office conversions via website postings. This method of carrier  
21 notification is used for all CLECs and ensures that BellSouth treats all  
22 CLECs in a nondiscriminatory manner. Mr. Price offers no insight as to  
23 the basis for his belief that written notification is somehow superior to  
24 website posting. Obviously, delays in written mail delivery or  
25 malfunctions of facsimile devices are possible which are obviated by

1 website posting of critical information.

2

3 **Issue 100: Should BellSouth operators be required to ask MCI**  
4 **WorldCom customers for their carrier of choice when such customers**  
5 **request a rate quote or time and charges?**

6

7 Q. ON PAGE 75 OF HIS TESTIMONY, MR. PRICE STATES THAT  
8 BECAUSE MCI WORLDCOM IS PAYING BELL SOUTH FOR  
9 PROVIDING OPERATOR SERVICES, IT IS REASONABLE THAT  
10 BELL SOUTH ASK THE CUSTOMER FOR ITS CARRIER OF  
11 CHOICE, RATHER THAN ASSUMING BELL SOUTH IS THE  
12 CARRIER OF CHOICE. PLEASE COMMENT.

13

14 A. BellSouth's operators may respond to customer inquiries concerning  
15 rates and time charges for BellSouth's retail services. However,  
16 BellSouth is not obligated to inquire about a customer's carrier of  
17 choice, as requested by MCI WorldCom.

18

19 Q. HOW DOES BELL SOUTH TREAT CUSTOMER REQUESTS FOR A  
20 LONG DISTANCE CARRIERS RATES?

21

22 A. Customers who inquire about long distance rates are advised they  
23 should seek that information from their long distance carrier. If that  
24 long distance carrier is an Operator Transfer Service (OTS) customer,  
25 BellSouth will offer to transfer the caller to that carrier so that the rate

1 can be quoted immediately by the long distance carrier itself.

2

3 MCI WorldCom's proposed language would purport to require  
4 BellSouth's operators to inquire as to the customer's carrier of choice  
5 of long distance carrier and forward the call to that carrier every time a  
6 customer requests a rate quote or time and charges, regardless of  
7 whether the long distance carrier subscribes to BellSouth's Operator  
8 Transfer Service (OTS). BellSouth is not required to do for free what  
9 MCI WorldCom has proposed.

10

11 Q. ON PAGE 75 OF HIS TESTIMONY, MR. PRICE SUGGESTS THAT  
12 MCI WORLDCOM IS WILLING TO PAY BELL SOUTH FOR CALLS  
13 HANDLED ON BEHALF OF MCI WORLDCOM. IS THIS  
14 PRACTICAL?

15

16 A. Despite MCI WorldCom's willingness to pay for any calls handled for  
17 MCI WorldCom, Mr. Price ignores the obvious requirement for  
18 BellSouth's operators to determine all end user customers' choice of  
19 long distance provider for all such inquiries, not only those bound for  
20 MCI WorldCom. The cost of such operator work-time for customers  
21 not choosing MCI WorldCom long distance service would be borne by  
22 BellSouth rather than by MCI WorldCom.

23

24 Q. ON PAGE 74 OF HIS TESTIMONY, MR. PRICE SUGGESTS THAT  
25 BELL SOUTH'S ORIGINATING LINE NUMBER SCREENING (OLNS)

1 METHOD WILL SOLVE THIS PROBLEM ONCE IMPLEMENTED. IS  
2 HE CORRECT?

3  
4 A. No. OLNS is a means of providing an operator services platform with  
5 information about the line originating a telephone call. OLNS, once  
6 implemented, will inform BellSouth's operator of which local service  
7 provider the caller is served by. However, OLNS will not display the  
8 caller's choice of long distance service provider. BellSouth has not yet  
9 implemented this OLNS method and should not be bound in any event  
10 that its operators inquire of the caller's long distance service provider  
11 unless and until such a method is in place and a capability that informs  
12 the operator of the caller's long distance service provider is likewise in  
13 place and functional.

14  
15 **Rebuttal to the testimony of Mr. Bomer**

16  
17 **Issue 55: Should BellSouth be required to provide a response, including**  
18 **a firm cost quote, within 15 days of receiving a collocation application?**

19  
20 Q. WITHIN WHAT INTERVAL DOES BELL SOUTH PROPOSE THAT IT  
21 PROVIDE A RESPONSE INCLUDING A FIRM PRICE QUOTE?

22  
23 A. Previously, BellSouth has proposed to MCI WorldCom that, pursuant  
24 to the FCC's Order of August 10, 2000, BellSouth will complete the  
25 provisioning of caged and cageless collocation arrangements within 90

1 calendar days of the date BellSouth receives a bona fide application  
2 from MCI WorldCom. Within this 90 calendar day interval, BellSouth  
3 will respond to MCI WorldCom indicating whether space is available  
4 within 10 calendar days and the associated firm price quote within 30  
5 calendar days. BellSouth has further proposed to provide a response,  
6 including a firm cost quote, within 15 days of receiving a collocation  
7 application if the Authority orders that standard space preparation  
8 pricing be applied for all application requests. This would include  
9 requests from CLECs with current agreements, which do not include  
10 standard space preparation pricing.

11  
12 BellSouth has reevaluated its collocation provisioning intervals and  
13 processes and is amending its position with respect to the issues  
14 addressing physical collocation intervals. Whereas previously,  
15 BellSouth has proposed a standard provisioning interval for collocation,  
16 BellSouth has now evaluated the benefits to both CLECs and  
17 BellSouth of CLEC-provided forecasts. As the Authority is aware, the  
18 issue of intervals for cageless collocation was considered in the  
19 context of the DeltaCom arbitration; however, the issue of CLEC-  
20 provided forecasts was not evaluated by the Authority or included in  
21 the Authority's determination of the appropriate interval for cageless  
22 collocation. BellSouth asks that this Authority reevaluate its collocation  
23 philosophy in light of BellSouth's proposal. This proposal incorporates  
24 the economies achieved by CLEC-forecasting of their collocation  
25 needs and the FCC has expressly approved such an approach.

Q. PLEASE COMMENT FURTHER ON THE FCC'S PROPOSAL.

A. In its collocation reconsideration order, FCC 00-297, the FCC set a national default standard of 90 calendar days for provisioning collocation space. In that order, the FCC acknowledged the benefits of CLEC-provided forecasts by authorizing ILECs to require CLECs to provide forecasts of their collocation needs. At that time, the FCC did not provide the ILECs with any remedies for inaccurate forecasts or for a CLEC's failure to provide a forecast, preferring to leave such issues to the state commissions to address. See paragraph 39 of that Order. However, in a subsequent decision, DA 00-2528, issued November 7, 2000, the FCC granted Verizon's, SBC's, and Qwest's requests for conditional waivers of the 90-day provisioning interval. In that order, the FCC acknowledged that it had now been presented with a more comprehensive record upon which to base its decision and that "this greatly expanded record countenances a moment of pause before we insist on absolute compliance with that Order". See paragraph 10 of that Order. The FCC went on to expressly endorse the intervals ordered by the New York Commission for Verizon, with one minor modification. These intervals incorporate specific CLEC forecasting requirements.

Q. WHAT IS BELLSOUTH'S REACTION TO THE FCC'S RECENT ACTION YOU HAVE JUST DESCRIBED?

20  
21  
22  
23  
24  
25

A. In reviewing the intervals and process adopted by the New York Commission, BellSouth believes that two major benefits can be achieved: First, CLECs will benefit from the reduced intervals made possible by the provision of CLEC forecasts. Second, BellSouth will be able to more effectively and more efficiently allocate its resources to the locations where the CLECs, through their forecasts, are requesting space.

Q. HAS BELL SOUTH TAKEN ANY REGULATORY ACTION WITH REGARD TO THE FCC'S RECENT DECISION?

A. Yes. BellSouth has filed a request with the FCC for authority to apply the New York ordered intervals, as modified by the FCC. This request is pending before the FCC. BellSouth is now requesting that this Authority consider the efficiencies obtained through CLEC-provided forecasts and adopt the proposed intervals, which are supported by the FCC as promoting facilities-based competition. BellSouth proposes the intervals for physical collocation found in Verizon's collocation tariff for New York.

**Issue 56: Should BellSouth be required to provide DC power to adjacent collocation space?**

Q. PLEASE COMMENT ON MR. BOMER'S STATEMENTS ON

1 BELLSOUTH'S POSITION AS SHOWN ON PAGE 20 OF HIS  
2 TESTIMONY.

3  
4 A. First, in making adjacent collocation available, BellSouth will do so in a  
5 nondiscriminatory manner (that is, all CLECs obtaining adjacent  
6 collocation will be treated in the same manner) and at parity with itself.  
7 At all of BellSouth's remote terminal sites (that is, sites away from  
8 BellSouth's central office buildings), AC power runs to the site and  
9 BellSouth then "converts" the AC power to DC power inside the remote  
10 site. BellSouth has thousands of such arrangements in service today  
11 across its nine-state region. Given that this is a normal business  
12 practice, BellSouth believes that this method of providing power to  
13 adjacent collocation arrangements is likewise appropriate.

14  
15 Second, as stated in my direct testimony, the FCC rules do not require  
16 BellSouth to provide DC power to an adjacent collocation arrangement.  
17 47 C.F.R. 51.323 (k)(3) only requires that BellSouth provide a power  
18 source to an adjacent arrangement, it does not specify the type of  
19 power. The National Electric Code (NEC) does not specifically state  
20 that DC power cable can not be used in the outdoor environment, but it  
21 does state that whatever cable (AC or DC) is to be used has to be  
22 rated for the environment in which it is being used. The cable used in  
23 the telecommunications industry for DC power (KS 548201) inside  
24 central offices is rated for indoor use, and not for use in an outdoor  
25 environment.

1

2 Q. DOES REQUIRING CLECs TO CONVERT AC POWER TO DC  
3 POWER DISCRIMINATE AGAINST THEM IN ANY MANNER?

4

5 A. No. BellSouth performs the same function at all of its remote sites and  
6 will provision power to all adjacent collocation arrangements in a  
7 nondiscriminatory manner.

8

9 Q. BEGINNING ON PAGE 20 OF HIS TESTIMONY, MR. BOMER  
10 STATES "I UNDERSTAND THAT BELLSOUTH IS NOT  
11 NECESSARILY WILLING TO PROVIDE AC POWER." IS HE  
12 CORRECT?

13

14 A. No. BellSouth is willing to provide AC power to CLECs' adjacent  
15 collocation arrangements so long as pertinent requirements of the  
16 National Electrical Code are met.

17

18 Q. ON PAGE 21 OF HIS TESTIMONY, MR. BOMER SUGGESTS THAT  
19 THE USE OF BATTERIES INSIDE THE ADJACENT COLLOCATION  
20 ARRANGEMENT "COULD INTRODUCE SAFETY CONCERNS."  
21 PLEASE COMMENT.

22

23 A. Obviously, any work that MCI WorldCom undertakes that is performed  
24 improperly might introduce safety concerns. While I acknowledge that  
25 having batteries inside a closed structure such as the adjacent

1 collocation arrangement might create safety concerns if improperly  
2 handled, I would note that BellSouth has literally thousands of sites  
3 such as its remote terminals away from the central office containing  
4 batteries of the sort we are discussing here and does so safely and  
5 without incident.

6  
7 Q. ON PAGE 21 OF HIS TESTIMONY, MR. BOMER STATES "INDEED,  
8 BELLSOUTH HAS OFFERED TO PROVIDE DC POWER IN OTHER  
9 COLLOCATION ARRANGEMENTS OUTSIDE THE CENTRAL  
10 OFFICE; NAMELY WITH RESPECT TO COLLOCATION AT REMOTE  
11 TERMINALS." PLEASE COMMENT.

12  
13 A. Mr. Bomer seems to suggest that BellSouth is willing to provide DC  
14 power differently dependent on whether the context is central office  
15 collocation or remote terminal collocation. If that is the meaning of that  
16 part of his testimony, he is completely wrong. BellSouth offers to  
17 provide DC power to collocation arrangements inside the BellSouth  
18 central office. Likewise, BellSouth offers to provide DC power to  
19 collocation arrangements inside the BellSouth remote terminal.  
20 Adjacent collocation arrangements are not inside the BellSouth central  
21 office and thus BellSouth offers to provide AC power rather than DC  
22 power. If MCI WorldCom were to place its own remote terminal next to  
23 (but not inside) BellSouth's remote terminal and request that BellSouth  
24 provide DC power to MCI WorldCom's remote terminal, BellSouth  
25 would have exactly the same concerns as for providing DC power from

1 BellSouth's central office to MCI WorldCom's adjacent collocation  
2 arrangement.

3

4 Q. ON PAGE 22 OF HIS TESTIMONY, MR. BOMER ASSERTS THAT  
5 BELLSOUTH'S PROVIDING DC POWER TO ADJACENT  
6 COLLOCATION ARRANGEMENTS "IS A MATTER OF FAIRNESS".  
7 DO YOU AGREE?

8

9 A. No. It is a matter of safety and conformance to industry standard  
10 safety requirements. BellSouth cannot knowingly allow a violation of  
11 applicable safety codes. Mr. Bomer has pointed to no provision of the  
12 National Electrical Code or any other applicable safety code that allows  
13 the provision of DC power which MCI WorldCom says it desires. Nor  
14 has Mr. Bomer suggested any manufacturer or product that could  
15 safely be used as he suggests.

16

17 Q. ON PAGE 22 OF HIS TESTIMONY, MR. BOMER ASSERTS THAT  
18 THE FLORIDA PUBLIC SERVICE COMMISSION'S ORDER IN ITS  
19 COLLOCATION DOCKET "...BY IMPLICATION INCLUDES DC  
20 POWER, TO THE EXTENT THAT ITS PROVISION IS TECHNICALLY  
21 FEASIBLE." DO YOU AGREE WITH HIS READING OF THAT  
22 SECTION OF THE FLORIDA COMMISSION'S ORDER?

23

24 A. No, I do not. He tacks on topics not related to the statement he  
25 quotes. BellSouth does not deny an obligation to provide physical

1 collocation services to a CLEC who collocates in a controlled  
2 environmental vault (CEV) or adjacent structure located on BellSouth's  
3 property. As shown above, this is not the issue at hand.

4  
5 **Issue 59: Should collocation space be considered complete before**  
6 **BellSouth has provided MCI WorldCom with cable facility assignments**  
7 **("CFAs")?**

8  
9 Q. MR. BOMER STATES ON PAGE 25 OF HIS TESTIMONY THAT  
10 BELL SOUTH SHOULD PROVIDE CFAs BEFORE THE SPACE IS  
11 CONSIDERED COMPLETED. PLEASE RESPOND.

12  
13 A. BellSouth believes that the collocation space is complete prior to  
14 providing Connecting Facility Assignments (CFAs). Connecting  
15 facilities are those cables usually extending from BellSouth's  
16 distributing frame to the collocation arrangement. Thus, for example  
17 when BellSouth provides an unbundled loop to an CLEC, cross-  
18 connections are made on the distributing frame to connect the loop  
19 and a cable pair in the connecting facility which provides continuity to  
20 the collocation arrangement. BellSouth will complete all work under its  
21 control, which includes the preparation of the requested space. At that  
22 point, the collocation space is considered complete since it is available  
23 for use by MCI WorldCom, which can then have its vendor install its  
24 equipment and cable runs for connecting facilities.

25

1 Q. WHAT WOULD BE THE PRACTICAL EFFECT OF ACCEPTING MCI  
2 WORLDCOM's PROPOSAL THAT A COLLOCATION  
3 ARRANGEMENT NOT BE CONSIDERED "COMPLETE" UNTIL CFAs  
4 ARE LOADED INTO THE APPROPRIATE DATABASES?

5  
6 A. If the space were not to be considered complete once BellSouth  
7 finishes its work (and, hence, billing would not start) until after the  
8 CFAs are provided, MCI WorldCom would be able to occupy the space  
9 indefinitely without paying floor space charges until it actually gets  
10 around to installing its equipment and provides BellSouth with the  
11 information necessary to assign the CFAs. Such an arrangement  
12 would be unreasonable, since BellSouth is entitled to be compensated  
13 for collocation as soon as the collocation space is available for use by  
14 MCI WorldCom, not when MCI WorldCom is actually using the space.

15  
16 **Issue 60: Should BellSouth provide MCI WorldCom with specified**  
17 **collocation information at the joint planning meeting?**

18  
19 Q. BASED ON READING MR. BOMER'S TESTIMONY BEGINNING ON  
20 PAGE 27 REGARDING THIS ISSUE, WHAT DO YOU SEE AS THE  
21 REAL AREA OF DISAGREEMENT?

22  
23 A. It would seem that the area of disagreement is on what information is  
24 needed by MCI WorldCom. BellSouth has committed to providing MCI  
25 WorldCom, to the extent it is available, information that MCI WorldCom

1 reasonably requires to begin its design plans for collocation space. If  
2 the information is not available at the joint planning meeting, BellSouth  
3 will provide such information within thirty (30) calendar days thereafter.  
4

5 Q. PLEASE ADDRESS MCI WORLDCOM'S REQUEST INCLUDED IN  
6 ATTACHMENT 5, SECTION 7.17.2.  
7

8 A. BellSouth assumes this request to be for cable assignment information  
9 for the cables that connect the collocation space to the frame in the  
10 central office. If the demarcation point is at the distributing frame,  
11 BellSouth will provide the exact cable location termination  
12 requirements (e.g., bay/panel and jack location) within the central  
13 office that should be used. If this information is not available at the  
14 joint planning meeting, BellSouth will provide it within 30 calendar days  
15 of the date of the meeting. For older collocation arrangements where  
16 the demarcation point is at the Point of Termination (POT) bay,  
17 BellSouth will run the cables from its distributing frame to the POT bay.  
18 In such a case, MCI WorldCom would not need this information since  
19 the work will be done by a BellSouth certified vendor rather than by  
20 MCI WorldCom's vendor.  
21

22 Q. PLEASE ADDRESS MCI WORLDCOM'S REQUEST INCLUDED IN  
23 ATTACHMENT 5, SECTION 7.17.4.  
24

25 A. BellSouth does not believe that MCI WorldCom reasonably requires

1 BellSouth to provide this information to them to begin its design plans  
2 for collocation space. In the same manner as BellSouth's own power  
3 cabling work is done, MCI WorldCom would use a certified vendor to  
4 perform all power cabling work. MCI WorldCom's BellSouth certified  
5 vendor has direct access to this information and would be responsible  
6 for making these assignments just as the certified vendor would do for  
7 BellSouth. If MCI WorldCom, out of curiosity, desires this information,  
8 they can easily request it from their vendor doing the work.

9  
10 Q. PLEASE ADDRESS MCI WORLDCOM'S REQUEST INCLUDED IN  
11 ATTACHMENT 5, SECTION 7.17.10.

12  
13 A. MCI WorldCom apparently believes that it (rather than BellSouth)  
14 should be able to designate, at any technically feasible point, the  
15 demarcation point between MCI WorldCom's network and BellSouth's  
16 network within BellSouth's central offices. There is simply no basis for  
17 this belief. Pursuant to 47 C.F.R 51.323 (d)(1), BellSouth must  
18 provide an interconnection point(s) at which the fiber optic cable can  
19 enter the premises, provided that BellSouth must designate the  
20 interconnection point(s) as close as reasonably possible to the  
21 premises. When MCI WorldCom chooses physical collocation as the  
22 technically feasible method of interconnection, the point of  
23 interconnection is dictated by FCC Rule. Where MCI WorldCom  
24 places its collocated equipment within the BellSouth central office  
25 should be determined by BellSouth rather than by the collocator. The

1 D.C. Circuit Court of Appeals has recognized that to permit an CLEC to  
2 pick and choose preferred space within a central office is unlawful and  
3 states:

4  
5 "The FCC offers no good reason to explain why a competitor, as  
6 opposed to the LEC, should choose where to establish  
7 collocation on the LEC's property; nor is there any good  
8 explanation of why LECs are forbidden from requiring com-  
9 petitors to use separate entrances to access their own equip-  
10 ment; nor is there any reasonable justification for the rule  
11 prohibiting LECs from requiring competitors to use separate  
12 or isolated rooms or floors. It is one thing to say that LECs  
13 are forbidden from imposing unreasonable minimum space  
14 requirements on competitors; it is quite another thing, how-  
15 ever, to say that competitors, over the objection of LEC  
16 property owners, are free to pick and choose preferred space  
17 on the LECs' premises, subject only to technical feasibility.  
18 There is nothing in s 251(c)(6) that endorses this approach.  
19 The statute requires only that LECs reasonably provide  
20 space for 'physical collocation of equipment necessary for  
21 interconnection or access to unbundled network elements at  
22 the premises of the local exchange carrier,' nothing more."

23  
24 BellSouth's right to designate the collocation site and where that  
25 collocation arrangement interconnects with BellSouth's network falls

1 squarely within BellSouth's responsibility and is essential if BellSouth is  
2 to control and manage the space within a central office in the most  
3 efficient manner and to the benefit of all CLECs.

4  
5 **Issue 61: What rate should apply to the provision of DC power to MCI**  
6 **WorldCom's collocation space?**

7  
8 Q. MR. BOMER STATES TON PAGE 31 OF HIS TESTIMONY THAT  
9 THE PRICE FOR POWER SHOULD BE ON A PER USED AMPERE  
10 BASIS. DO YOU AGREE?

11  
12 A. No, as stated in my direct testimony, the charge should be applied to  
13 the fused capacity that BellSouth is required to provide to MCI  
14 WorldCom. Equipment manufacturers provide the rated power  
15 consumption for their equipment, and BellSouth builds its power plant  
16 accordingly. Central office equipment is normally turned on all the  
17 time, unlike some appliances in one's house. For example, a fiber  
18 optic terminal generally pulls the same amount of power every month,  
19 regardless of how much actual traffic it carries. BellSouth must build  
20 its power plant to assure that the power plant actually built will meet  
21 the needs of BellSouth's equipment and the sum of all collocators'  
22 equipment.

23  
24 Q. WHAT WOULD BE REQUIRED TO ACCOMMODATE MCI  
25 WORLDCOM'S REQUEST THAT IT BE BILLED FOR ACTUAL

1           POWER CONSUMED BY ITS EQUIPMENT?

2  
3    A.    BellSouth would have to install monitoring equipment for each  
4           collocation arrangement in each central office and would have to have  
5           someone read the monitor on each collocation arrangement in each  
6           central office in order to obtain the information necessary to bill power  
7           to each CLEC. This could be a costly and time-consuming process.  
8           Even if such a manual monitoring plan were practical, which I believe it  
9           is not, MCI WorldCom's proposal fails to take into consideration that  
10          BellSouth's costs for its power plant are a function of peak power loads  
11          to be handled rather than average or nominal loads. This is because  
12          the power plant must be built to withstand peak aggregate power  
13          demands for both BellSouth's equipment and all collocators'  
14          equipment. For these reasons, MCI WorldCom's proposal should be  
15          rejected.

16  
17       The Authority may recall that the issue of measuring actual power  
18       consumption was addressed in the Arbitration proceedings between  
19       BellSouth and NEXTLINK in Docket 98-00123. BellSouth and  
20       NEXTLINK agreed that upon request of NEXTLINK and at its expense,  
21       the parties would work cooperatively to identify and install suitable  
22       power monitoring devices and would develop and implement  
23       procedures to read and tabulate monitored power consumption levels  
24       from which a bill would be generated. BellSouth is willing to do  
25       likewise with MCI WorldCom.

Finally, in adopting MCI WorldCom’s collocation model in Docket 97-01262, it is my understanding that this Authority has established rates for power on a fused capacity basis. BellSouth believes that the Authority should reach the same conclusion in this proceeding.

**Issue 62: Should BellSouth be required to provision caged collocation space (including provision of the cage itself) within 90 days and virtual and cageless collocation within 45 days?**

Q. WHAT IS BELLSOUTH'S POSITION ON THE PROPER PROVISIONING INTERVALS FOR CAGED PHYSICAL COLLOCATION, CAGELESS PHYSICAL COLLOCATION AND VIRTUAL COLLOCATION?

A. Previously, BellSouth has offered to provision caged and cageless physical collocation arrangements within 90 calendar days from its receipt of an application unless the CLEC misses its seven-day interval for responding with a bona fide order. If the CLEC misses its seven-day interval, then the 90 calendar day interval is measure from the date of the bona fide order. Under extraordinary circumstances and absent agreement by the parties to a longer provisioning interval, where BellSouth is unable to complete the provisioning work within 90 calendar days, BellSouth will seek a waiver from this Authority to extend the provisioning interval beyond 90 calendar days. BellSouth

1 has proposed that it will provision virtual collocation arrangements  
2 within 50 calendar days in ordinary circumstances and within 75  
3 calendar days for extraordinary circumstances. As I discussed in  
4 regards to Issue 55, BellSouth believes that the effect of CLEC-  
5 provided forecasts should be considered in the collocation intervals  
6 ordered by this Authority. Accordingly, it is BellSouth's belief that the  
7 Authority should order the collocation intervals contained in Verizon's  
8 collocation tariff for New York.

9  
10 Q. ON PAGE 35 OF HIS TESTIMONY, MR. BOMER SUGGESTS THAT  
11 VIRTUAL COLLOCATION AND CAGELESS PHYSICAL  
12 COLLOCATION ARE SIMILAR EXCEPT THAT FOR CAGELESS  
13 PHYSICAL COLLOCATION TAPE IS PLACED ON THE FLOOR TO  
14 IDENTIFY THE ARRANGEMENT AND FOR VIRTUAL  
15 COLLOCATION BELL SOUTH, RATHER THAN MCI WORLDCOM, IS  
16 RESPONSIBLE FOR PROVISIONING AND MAINTENANCE OF THE  
17 EQUIPMENT. DO YOU AGREE?

18  
19 A. Not entirely. Virtual collocation and physical collocation are two  
20 different service offerings. While a collocating carrier has direct access  
21 to its physical collocation equipment on a twenty-four hour a day,  
22 seven-day a week basis, access to virtual collocation is restricted to  
23 limited inspection visits only. Since BellSouth leases virtual collocation  
24 equipment from the carrier and assumes the maintenance and repair  
25 responsibility at the direction of the collocator, virtual collocation

1 arrangements are sometimes placed within the BellSouth equipment  
2 line-up.

3

4 Q. ON PAGE 36 OF HIS TESTIMONY, MR. BOMER ASSERTS THAT  
5 CAGELESS COLLOCATION MAY BE PROVISIONED IN A  
6 SHORTER INTERVAL THAN CAGED COLLOCATION. DO YOU  
7 AGREE?

8

9 A. No. Mr. Bomer's suggestion implies that activities required provision  
10 collocation arrangements go on in serial rather than parallel fashion.  
11 That is incorrect. To the extent possible, activities are handled at the  
12 same time so as to shorten the overall provisioning interval. Normally,  
13 the installation of a cage (if the CLEC has requested one) goes on at  
14 the same time as other required activities such as power plant work or  
15 heating and air conditioning work, for example. Thus, the best way to  
16 determine the provisioning interval is to examine the nature and  
17 quantity of work to be performed and develop a schedule accordingly  
18 rather than according to simply whether the resulting arrangement will  
19 be caged or cageless.

20

21 **Issue 63: Is MCI WorldCom entitled to use any technically feasible**  
22 **entrance cable, including copper facilities?**

23

24 Q. ON PAGE 39 OF HIS TESTIMONY, MR. BOMER STATES THAT  
25 BELL SOUTH "ADMITS" THAT THERE IS A SIGNIFICANT AMOUNT

1 OF COPPER CABLE OWNED BY BELL SOUTH ENTERING ITS  
2 CENTRAL OFFICES? IS HE CORRECT?

3  
4 A. Mr. Bomer is correct only in the sense that some copper cables  
5 currently enter BellSouth central offices. However, what Mr. Bomer  
6 fails to mention is that these older cables are associated with  
7 BellSouth's loop distribution facilities rather than interoffice facilities or  
8 interconnection facilities. In the context of this dispute, entrance  
9 facilities are considered to be for interconnection trunks, and all of  
10 BellSouth's interconnection trunk cables entering BellSouth central  
11 offices are optical fiber facilities. Furthermore, the FCC rules regarding  
12 an ILEC's collocation obligation under the Act established by the FCC  
13 state that the ILEC should only accommodate copper entrance  
14 facilities if such interconnection is first ordered by the state  
15 commission. See 47 C.F.R. 51.323 (d)(3). To my knowledge, MCI  
16 WorldCom has made no such showing before this Authority or another  
17 Commission in BellSouth's nine-state region. The FCC clearly  
18 anticipated that this authority to place non-fiber optic entrance facilities  
19 would be granted by a state commission on a location by location  
20 basis. For any state commission to permit copper entrance facilities  
21 universally would undermine the importance the FCC attributed to this  
22 issue and would be to the detriment of other CLECs desiring to  
23 collocate in an office with limited entrance space available. Neither  
24 MCI WorldCom nor any other CLEC should be permitted to place  
25 copper entrance facilities in a premises until this Authority has

1 reviewed the particular circumstances of the premises, the specific  
2 needs of the requesting CLEC at that location, and has determined  
3 that the CLEC's needs override BellSouth's and other CLEC's  
4 concerns, if any, with entrance space availability in those premises.  
5

6 Q. HAS ANOTHER STATE COMMISSION ADDRESSED THIS ISSUE?  
7

8 A. Yes, I note that requests for reconsideration and clarification were  
9 made by several parties on this ruling by the Florida Public Service  
10 Commission in the Florida Collocation Docket (Docket Nos. 981834-  
11 TP/990321-TP). The Florida Staff issued a recommendation to the  
12 Florida Commission on the request dated July 20, 2000. In the  
13 recommendation, the Staff writes:  
14

15 Staff recommends that the Commission make the requested  
16 clarification regarding the use of copper entrance cabling. The  
17 Order could be misconstrued, as the parties have indicated. As  
18 such, the Commission should clarify that the Commission's  
19 decision only addresses the use of copper entrance cabling within  
20 the context of collocation outside of a CO, but does not reach the  
21 issue of copper cabling in other situations. In rendering this  
22 clarification, the Commission should also clarify that only  
23 collocation between an ALEC's CEV and an ILEC CO was  
24 considered in this decision.  
25

1 As can be seen from the above, the Florida Staff recommended to the  
2 Florida Commission that they clarify that they were only addressing the  
3 cabling from the adjacent collocation arrangement on the ILEC  
4 property to the central office. On September 5, 2000, the Staff's  
5 recommendation, as outlined above, was approved by the Florida  
6 Commission.

7  
8 **Issue 64: Is MCI WorldCom entitled to verify BellSouth's assertion, when**  
9 **made, that dual entrance facilities are not available? Should BellSouth**  
10 **maintain a waiting list for entrance space and notify MCI WorldCom**  
11 **when space becomes available?**

12  
13 Q. DO YOU AGREE WITH MR. BOMER THAT MCI WORLDCOM  
14 SHOULD BE ALLOWED TO VERIFY BELL SOUTH'S ASSERTION  
15 THAT DUAL ENTRANCES ARE NOT AVAILABLE?

16  
17 A. Yes. However, this dispute centers on the type of verification that is  
18 necessary. In BellSouth's view, when there is only one entrance point,  
19 MCI WorldCom can visually verify that another entrance point does not  
20 exist without any "tour" by BellSouth. This could be done by a cursory  
21 review of the central office building floorplan. However, I understand  
22 that MCI WorldCom insists that BellSouth must provide a formal tour of  
23 the premises similar to the tour BellSouth must conduct under the FCC  
24 rules when an incumbent contends space for physical collocation is not  
25 available. BellSouth has agreed to provide documentation to MCI

1 WorldCom verifying the lack of dual entrance facilities, which is a  
2 reasonable accommodation of MCI WorldCom's needs.  
3

4 Q. IS MCI WORLDCOM'S REQUEST FOR A FORMAL TOUR WHEN  
5 DUAL ENTRANCE FACILITIES ARE NOT AVAILABLE SUPPORTED  
6 BY ANY FCC RULES?  
7

8 A. No. The FCC rules which obligate an incumbent to provide a tour of its  
9 facilities in order to verify an assertion that physical collocation is not  
10 available only applies to physical collocation. This rule has absolutely  
11 nothing to do with the situation where space is available, but dual  
12 entrance points do not exist. Presumably, if the FCC had wanted to  
13 require incumbents to provide formal tours of premises when dual  
14 entrance facilities do not exist, it readily could have done so. It did not  
15 do so, however.  
16

17 Q. DO YOU AGREE WITH MR. BOMER'S SUGGESTION ON PAGE 44  
18 OF HIS TESTIMONY THAT IT IS REASONABLE TO EXPECT  
19 BELLSOUTH TO MAINTAIN A WAITING LIST FOR DUAL  
20 ENTRANCES FACILITIES?  
21

22 A. No. Maintaining a waiting list is not as simple a matter as Mr. Bomer  
23 apparently believes. There is considerable time and expense  
24 associated with maintaining a waiting list for each central office in  
25 which dual entrance facilities may not be available. No plausible

1 reason exists for BellSouth to engage in such an effort when BellSouth  
2 does not have dual entrance facilities available, but MCI WorldCom  
3 has space available for its facilities. If the FCC had wanted  
4 incumbents such as BellSouth to maintain a waiting list for dual  
5 entrance facilities (as it did for physical collocation space), it could  
6 have done so. However, it did not do so and neither should this  
7 Authority.

8  
9 **Issue 65: What information must BellSouth provide to MCI WorldCom**  
10 **regarding vendor certification?**

11  
12 Q. ON PAGE 46 OF HIS TESTIMONY, MR. BOMER STATES THAT  
13 BELLSOUTH HAS NOT PROVIDED SPECIFIC INFORMATION TO  
14 ALLOW MCI WORLDCOM's CHOSEN VENDORS TO BECOME  
15 CERTIFIED. DO YOU AGREE?

16  
17 A. I do not. First, it is clear from the FCC rule that it is BellSouth, and not  
18 MCI WorldCom, that is responsible for ensuring that a vendor has met  
19 the criteria for certification. 47 C.F.R. 51.323(j) states that "An  
20 incumbent LEC shall permit a collocating telecommunications carrier to  
21 subcontract the construction of physical collocation arrangements with  
22 contractors approved by the incumbent LEC..." [Emphasis added.]  
23 Second, BellSouth has provided MCI WorldCom with precisely the  
24 same information that BellSouth provides other vendors concerning the  
25 vendor certification process. As stated in my direct testimony, if MCI

1 WorldCom has any questions regarding this process, MCI WorldCom  
2 may contact the BellSouth vendor certification group for further  
3 information. BellSouth has several vendors currently certified under  
4 this process.

5  
6 Mr. Bomer complains about the level of detail that BellSouth has  
7 provided MCI WorldCom regarding what criteria BellSouth will use to  
8 certify vendors. First, I note that many vendors have been certified  
9 under BellSouth's process and this is the first complaint that I have  
10 heard that BellSouth does not adequately characterize what is required  
11 to become certified.

12  
13 Mr. Bomer apparently believes that every question on every test  
14 should be made known to MCI WorldCom before it proposes  
15 certification of itself or a particular vendor. To analogize, I would note  
16 that when one applies for a particular course of study at a college or  
17 university, one learns what course work will satisfy the degree  
18 requirements. One does not, however, get a list of all the text books  
19 that might be used in those courses, copies of the tests and  
20 examinations the professor will use or the correct answers to those  
21 tests and examinations. BellSouth believes it has provided MCI  
22 WorldCom and requesting vendors with adequate information that it  
23 can use to decide whether or not to pursue certification under  
24 BellSouth's process.

1   **Issue 66: What industry guidelines or practices should govern**  
2   **collocation?**

3  
4   Q.   PLEASE COMMENT ON MR. BOMER'S DESIRE TO INCLUDE EACH  
5        OF THE LISTED DOCUMENTS IN THE AGREEMENT AND AS  
6        SHOWN BEGINNING ON PAGE 47 OF HIS TESTIMONY.

7  
8   A.   MCI WorldCom wants BellSouth to comply with standards that are  
9        inapplicable to the relationship BellSouth has with MCI WorldCom in  
10       providing collocation (vendor relations), and still others that have been  
11       deemed inapplicable pursuant to the FCC's Advanced Services Order  
12       (Network Equipment-Building System or "NEBS" performance  
13       standards) at paragraph 135. As stated in my direct testimony,  
14       BellSouth is willing to comply with generally accepted industry  
15       practices to the extent it has control over the subject matter thereof.  
16       BellSouth is not the only other occupant of the premises and does not  
17       have absolute control over many of the issues addressed in the  
18       standards MCI WorldCom references. Moreover, these standards  
19       include far more than generally accepted practices that an ILEC would  
20       be required to conform to. For example, MCI WorldCom's request  
21       would purport to hold BellSouth to all of the provisions of the National  
22       Electrical Code whether such a provision has anything at all to do with  
23       the provision of collocation. For example, Article 520 of the National  
24       Electrical Code provides requirements for "Theaters, Audience Areas  
25       of Motion Picture and Television Studios, and Similar Locations",

1 subjects in no way related to the provision of collocation in BellSouth's  
2 central office buildings. BellSouth is willing to comply with generally  
3 accepted industry practices, such as the National Electric Code, to the  
4 extent BellSouth controls the issue addressed therein, or to discuss  
5 any specific portions of the listed documents to determine if the parties  
6 can agree to the language. It is not clear to me why MCI WorldCom  
7 objects to such an approach.

8  
9 **Rebuttal to the testimony of Mr. Olson**

10  
11 **Issue 37: Should BellSouth be permitted to require MCI WorldCom to**  
12 **fragment its traffic by traffic type so it can interconnect with BellSouth's**  
13 **network.**

14  
15 Q. WHAT PART OF ISSUE 37 DOES YOUR TESTIMONY ADDRESS?

16  
17 A. I address this issue only in respect to the engineering principles useful  
18 in the provisioning of two-way trunking.

19  
20 Q. WHAT IS YOUR UNDERSTANDING OF THE DISAGREEMENT  
21 BETWEEN MCI WORLDCOM AND BELLSOUTH REGARDING THE  
22 USE OF TWO-WAY TRUNKING?

23  
24 A. My reading of Mr. Olson's testimony on page 15 of his testimony  
25 indicates to me that the issue is confined to whether MCI WorldCom's

1 proposed language regarding two-way trunking should be adopted.  
2 MCI WorldCom's proposal is that "BellSouth shall provision two-way  
3 trunks without any user restrictions or trunk fragmentation  
4 requirements except as specified in this Agreement." I read that to  
5 mean that BellSouth must accede to every MCI WorldCom request to  
6 use two-way trunking whether BellSouth agrees that is the best choice  
7 or not.

8  
9 Q. DOES BELL SOUTH OPPOSE THE USE OF TWO-WAY TRUNKING?

10  
11 A. No. BellSouth is not opposed to two-way trunking per se. Under MCI  
12 WorldCom's proposal, however, BellSouth would be prohibited from  
13 having separate trunks that carry local and toll traffic, even though  
14 BellSouth maintains such separate trunk groups for itself. BellSouth  
15 should be allowed to provision its trunks for its originating traffic to be  
16 terminated to MCI WorldCom any technically feasible and  
17 nondiscriminatory manner without regard to the arbitrary conditions  
18 that MCI WorldCom seeks to impose.

19  
20 Q. WHEN SHOULD TWO-WAY TRUNKING BE USED?

21  
22 A. BellSouth believes that the use of one-way trunking or two-way  
23 trunking is best determined by the parties on a case-by-case basis. In  
24 stark contrast, MCI WorldCom's position is that BellSouth should be  
25 required to interconnect via two-way trunks whenever MCI WorldCom

1           so requests. The net effect is that MCI WorldCom would be in sole  
2           control of when and if BellSouth is able to use one-way trunking or two-  
3           way trunking to interconnect BellSouth's network with MCI WorldCom's  
4           network. Doubtless, MCI WorldCom would always choose the method  
5           to its own economic benefit regardless of the effect on BellSouth.

6

7    Q.    DOES THIS CONCLUDE YOUR TESTIMONY?

8

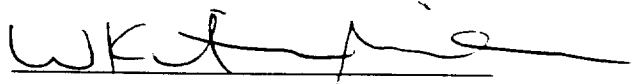

9    A.    Yes.

AFFIDAVIT

STATE OF: Georgia  
COUNTY OF: Fulton

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared W. Keith Milner – Senior Director – Interconnection Services, BellSouth Telecommunications Inc., who, being by me first duly sworn deposed and said that:

He is appearing as a witness before the Tennessee Regulatory Authority in Docket No. 00-00309 on behalf of BellSouth Telecommunications, Inc., and if present before the Authority and duly sworn, his testimony would be set forth in the annexed testimony consisting of 51 pages and 0 exhibit(s).

W. Keith Milner

Sworn to and subscribed  
before me on Dec 8, 2000

  
NOTARY PUBLIC

**MICHEALE F. HOLCOMB**  
Notary Public, Douglas County, Georgia  
My Commission Expires November 3, 2001

1 BELL SOUTH TELECOMMUNICATIONS, INC.

2 REBUTTAL TESTIMONY OF DAVID A. COON

3 BEFORE THE TENNESSEE REGULATORY AUTHORITY

4 DOCKET NO. 00-00309

5 DECEMBER 13, 2000

6

7 Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELL SOUTH  
8 TELECOMMUNICATIONS, INC. ("BELL SOUTH") AND YOUR BUSINESS  
9 ADDRESS.

10

11 A. My name is David A. Coon. I am employed by BellSouth as Director –  
12 Interconnection Services for the nine-state BellSouth region. My business  
13 address is 675 West Peachtree Street, Atlanta, Georgia 30375.

14

15 Q. ARE YOU THE SAME DAVID A. COON WHO FILED DIRECT  
16 TESTIMONY IN THIS PROCEEDING?

17

18 A. Yes I am.

19

20 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

21

22 A. I will address the direct testimony of MCI WorldCom witness, Karen Kinard  
23 regarding Issue 105 raised in MCI WorldCom's Petition for Arbitration in  
24 Tennessee.

1

2 Q. ON PAGE 3 OF MS. KINARD'S TESTIMONY SHE STATES THAT  
3 THOSE MEASUREMENTS INCLUDED IN MCI WORLDCOM'S VERSION  
4 OF ATTACHMENT 10 ARE THE MEASURES THAT SHOULD BE USED  
5 IN THE BELL SOUTH/MCI WORLDCOM INTERCONNECTION  
6 AGREEMENT. WOULD YOU CARE TO COMMENT?

7

8 A. Yes. I would like to reemphasize, as I stated previously in my direct  
9 testimony, that BellSouth's SQMs are the appropriate set of  
10 measurements that should be adopted by this Authority. BellSouth's  
11 SQMs fully and comprehensively comply with the requirements of the  
12 Telecommunications Act of 1996 (Act) to demonstrate either access in  
13 "substantially the same time and manner"<sup>1</sup> or providing a CLEC "a  
14 meaningful opportunity to compete."<sup>2</sup> Additionally, BellSouth's SQMs  
15 provide the Authority with the data and information necessary to monitor  
16 BellSouth's performance and to detect disparate treatment, should it  
17 occur. The additional measurements and disaggregation offered by Ms.  
18 Kinard generally focus on measuring sub-processes within processes. To  
19 attempt to measure every single process and sub-process associated with  
20 the business relationship between a CLEC and an ILEC, as the MCI  
21 WorldCom plan attempts to do, was never the intention of the Act.  
22 Furthermore, performance measurements impact the entire CLEC

---

<sup>1</sup> FCC 96-325, First Report and Order, Adopted August 1, 1996, § V.5, ¶ 518.

<sup>2</sup> FCC 96-325, Second Order for Reconsideration, Adopted December 13, 1996, § I., ¶ 9.

1 community in Tennessee and as such, are more appropriately addressed  
2 in a generic performance measurement proceeding. Finally, BellSouth's  
3 Service Quality Measurements have already been adopted by in excess of  
4 79 CLECs in Tennessee as part of their interconnection agreements.  
5

6 Q. ON PAGES 4 THROUGH 11 OF HER DIRECT TESTIMONY, MS.  
7 KINARD IDENTIFIES SPECIFIC MEASUREMENTS MISSING FROM  
8 THE BELL SOUTH SERVICE QUALITY MEASUREMENTS (SQM).  
9 WOULD YOU CARE TO COMMENT ON EACH OF THESE MISSING  
10 MEASUREMENTS?  
11

12 A. Yes. I would like to take this opportunity to comment on each of the "key"  
13 measurements that Ms. Kinard testified are missing from BellSouth's  
14 SQM.  
15

16 **Percent Design Layout Records Received in X Days.**

17 This is an example of a measurement of a sub-process. This particular  
18 measurement is for the Design Layout Record associated with  
19 interconnection trunks. This is part of the overall process of ordering and  
20 provisioning interconnection trunking. Both of these processes are  
21 currently measured by the FOC Timeliness, Order Completion Interval,  
22 and Missed Installation Appointments measurements, to name a few.

1 There is no need for an additional measurement that addresses only a  
2 portion of the ordering and provisioning processes.

3  
4 **Percent On-Time Loss Notification.**

5 This measurement would require that BellSouth notify MCI WorldCom  
6 when MCI WorldCom is losing a customer to either BellSouth or another  
7 CLEC. BellSouth has no such notification process in place, therefore it  
8 would be impossible to measure a process that does not exist. Moreover,  
9 a fundamental issue is the legality of such a process, even if it did exist.  
10 Ms. Kinard is suggesting that BellSouth participate in the questionable  
11 practice of notifying MCI WorldCom in advance, that they are about to lose  
12 one of their customers. This is a process that is patently wrong. Would  
13 MCI WorldCom seriously entertain the thought of providing similar  
14 advance notification to BellSouth retail when MCI WorldCom was  
15 negotiating with a BellSouth retail customer? Not only is this process and  
16 this measurement inappropriate, it is not necessary. MCI WorldCom  
17 should have the disconnect order from their end user and that should  
18 provide MCI WorldCom with the advance notification it is seeking.

19  
20 **Average Offered Interval.**

21 BellSouth believes that it's existing measurements, Average Order  
22 Completion Interval, when looked at in conjunction with Percent Missed

1 Due Dates, more accurately reflects the customer experience  
2 representative of this proposed measurement by MCI WorldCom.

3  
4 **Percent Order Accuracy.**

5 BellSouth's position has always been that this measurement is  
6 unnecessary and overly burdensome and that BellSouth's existing  
7 measurement, Percent Provisioning Troubles within 30 Days of Service  
8 Order Activity is representative of the accuracy of BellSouth's order  
9 completions. The FCC agreed in FCC 98-72, ¶ 68, in stating "We believe,  
10 therefore, that this measurement (Percentage of Troubles in 30 Days for  
11 New Orders) will provide information about whether the incumbent LEC  
12 processed the order accurately. Accordingly, we propose that incumbent  
13 LECs measure the Percentage of Troubles in Thirty Days for New Orders  
14 as a substitute for LCUG's proposed measurement of Percentage Orders  
15 Processed Accurately. We believe that the Percentage of Troubles in  
16 Thirty Days for New Orders will provide the information sought by LCUG,  
17 but will be a less burdensome measurement than measuring order  
18 accuracy". The LCUG proposed measurement is the same measurement  
19 as proposed by Ms. Kinard in this proceeding.

20  
21 **Provisioning Troubles Prior to Loop Acceptance.**

22 BellSouth has a new "hot cut" measure (included in the SQM attached to  
23 my direct testimony), % installation troubles within 7 days that will allow

1 the CLEC to report a trouble as soon as the service order is completed.

2 As with any cutover, services that do not work are resolved during the  
3 cutover before the order is completed in the system. All other items will be  
4 included in this new measurement. MCI WorldCom's proposed  
5 measurement is not needed to measure the quality of the cutovers.

6  
7 **Percent Service Loss From Early Cuts and Percent Service Loss**  
8 **from Late Cuts.**

9 BellSouth is introducing several new hot cut measurements that address  
10 this very issue: Hot Cut Timeliness % within Interval, Hot Cut Timeliness  
11 Average Interval, and Reason for missed cuts. The Hot Cut Timeliness  
12 reports also provide a distribution of time so that the Authority and MCI  
13 WorldCom can view early and late cuts individually.

14  
15  
16 **Percent of Time 10-Digit Trigger is Applied "X" Hours Prior to the**  
17 **LNP Order Due Date.**

18 BellSouth has developed a new measurement, Average Disconnect  
19 Timeliness & Disconnect Timeliness Interval Distribution, which BellSouth  
20 believes more accurately reflects its performance in responding to the MCI  
21 WorldCom message to activate the number porting. BellSouth's  
22 measurement defines disconnect timeliness as the interval between the  
23 time the LNP Gateway receives the "Number Ported" message from

1       Numbering Plan Administrative Center (signifying the CLEC activation of  
2       number porting) until the time that service is disconnected. This interval  
3       effectively measures BellSouth's responsiveness by isolating it from  
4       impacts that are caused by CLEC related activities.

5  
6       **Average Notification of Interface/OSS Outage.**

7       For the past six months BellSouth has been averaging over 99.9% OSS  
8       interface availability. What could Ms. Kinard hope to gain from a report  
9       that only deals with one tenth of one percent or less of the time that the  
10      interface was unavailable. In addition, BellSouth posts all schedule  
11      downtimes, in advance, on the BellSouth Interconnection web site.

12  
13      **Percent of Change Management Notices and Documentation Sent**  
14      **On-Time.**

15      BellSouth agrees that a Change Management measurement is necessary.  
16      BellSouth is delivering two new measurements to satisfy this requirement.  
17      BellSouth believes that the purpose of change management is to work  
18      together as a team and prioritize the requirements for the good of all  
19      participants. With that in mind measuring anything other than the process  
20      is unnecessary. The new BellSouth measurements are results focused  
21      and are the only ones necessary to provide a parity comparison of the  
22      change management process.

1       **Percent Software Certification Failures and Software Problems**

2       **Resolution Timeliness.**

3       BellSouth believes that the testing arrangements made available with any  
4       software update are adequate to resolve these issues before the software  
5       is loaded. The change management process is more suitable to establish  
6       methods and procedures for software updates. Participating in that  
7       process would eliminate the need for such measures.

8  
9       **Percent of ILEC Responses to Reciprocal Trunk Requests in "X"**

10      **Days.**

11      For interconnection trunking, the key measurement is trunk blocking.  
12      BellSouth already has this measurement. The primary focus of  
13      Interconnection Trunk measurements is to have sufficient trunking  
14      capacity from the BellSouth network to the CLEC switch when traffic is  
15      increased substantially, such as might occur when an Internet Service  
16      Provider is switched to the CLEC. The best solution to this problem is not  
17      through additional measurements but through an accurate forecast by the  
18      CLEC of traffic requirements.

19  
20      **Mean Time to Notify CLEC of Network Disruptions and Restorations.**

21      This item would be better handled through contract negotiations on an  
22      individual basis rather than try and develop additional measures for all  
23      CLECs. Beginning in April BellSouth added disaster information and

1 system outages to its interconnection web site currently available to the  
2 CLECs.

3  
4 **Average Collocation Delay Days for Missed Due Dates.**

5 BellSouth agrees with Ms. Kinard's statement on lines 6 and 7, page 10 of  
6 her direct testimony. "It is critical that collocation due dates are not  
7 missed at all and it is important to know how often collocation due dates  
8 are missed." BellSouth's existing collocation measurements provide  
9 information on missed due dates and the frequency of misses. BellSouth  
10 already produces three measurements for collocation including the  
11 percent of missed due dates that are summarized in the matrix below for  
12 the first six months of this year. As is readily visible from the matrix,  
13 missing due dates for collocation arrangements, whether virtual or  
14 physical, has not been a problem for BellSouth in Tennessee. These  
15 numbers represent the aggregate of all CLECs in Tennessee, not just MCI  
16 WorldCom. Until such time as MCI WorldCom is able to produce  
17 substantive evidence justifying the need for development of Average  
18 Collocation Delay Days for Missed Due Dates, there is no legitimate  
19 reason for this Authority to order it as part of this proceeding.

20  
21

PERCENT OF DUE DATES MISSED				
	Physical Collocation		Virtual Collocation	
	Initial Install	Augmentation	Initial Install	Augmentation
1/22 – 2/21/2000	0	0	0	0
2/22 – 3/21/2000	0	0	0	0
3/22 – 4/21/2000	0	0	0	0
4/22 – 5/21/2000	0	0	0	0
5/22 – 6/21/2000	0	0	0	0
6/22 – 7/21/2000	0	0	0	0

1  
2 **Percent NXXs Loaded and Tested Prior to the LERG Effective Date.**

3 BellSouth's systems do not currently capture the date an NXX is loaded or  
4 tested or the LERG effective date. In order to develop this measurement,  
5 BellSouth would be required to develop a new system capability to capture  
6 this data as well as modify its Performance Measurement Analysis  
7 Platform (PMAP) system to produce reports on the performance of the  
8 new system capability. MCI WorldCom has failed to demonstrate any  
9 need for this measurement sufficient to justify the BellSouth resources  
10 necessary to develop the measurement.  
11

12 Q. AT PAGE 11 OF HER TESTIMONY, MS. KINARD ALLEGES THE NEED  
13 FOR APPROPRIATE LEVELS OF DISAGGREGATION IN ALL THESE  
14 AREAS: CLEC, PRODUCT, ORDERING ACTIVITY, GEORGRAPHIC  
15 SCOPE, VOLUME, INTERFACE TYPE AND REASON FOR HELD  
16 ORDER. HOW DO YOU RESPOND?  
17

18 A. BellSouth's SQM already provides disaggregation for all the categories,  
19 delineated above, cited by Ms. Kinard. BellSouth observes that Ms. Kinard  
20 devotes nearly 5 pages of testimony describing disaggregation that  
21 BellSouth already complies with. To clarify, the 1996 Act requires  
22 BellSouth to produce Performance Measurements that permit regulatory  
23 bodies to monitor non-discriminatory access. It was not the intent of the

1 Act or the FCC to have measurements for each and every process or sub-  
2 process, for each and every product, at the lowest geographic level, each  
3 month. The FCC provided guidance on the number of measures in the  
4 NPRM when it stated that the "requirement for performance  
5 measurements should balance the goal of detecting discrimination with  
6 the goal of minimizing the burden on the local exchange carrier." (CC  
7 Docket 98-56, Para 36)

8

9 Q. ON PAGE 11 OF HER TESTIMONY, MS. KINARD DESCRIBES WHY IT  
10 IS IMPORTANT TO DISAGGREGATE BY INDIVIDUAL CLEC. THEN ON  
11 PAGE 12 SHE STATES THAT BELL SOUTH FAILS TO PROVIDE CLEC  
12 SPECIFIC DATA ON ITS OSS QUERY RESPONSE TIME  
13 MEASUREMENT. WOULD YOU CARE TO RESPOND?

14

15 A. Yes. BellSouth agrees with Ms. Kinard that, whenever appropriate,  
16 BellSouth should disaggregate its measurements by individual CLEC. In  
17 fact, BellSouth does exactly that each and every month and posts this  
18 CLEC specific data on a secure, password protected web site. However,  
19 Ms. Kinard's example of OSS Query Response Time is an inappropriate  
20 example. The OSSs that generate this measurement are regional OSSs  
21 that make no distinction as to the originator of the query. All queries,  
22 whether CLEC or BellSouth, Tennessee or Georgia (or any other state),  
23 are treated exactly the same. The key is "how long is the response

1 interval" and BellSouth's measurement demonstrates those results. From  
2 a more pragmatic viewpoint, OSS response intervals for pre-ordering  
3 processes, as an example, are measured in seconds. Typically these  
4 response intervals are 5 seconds or less. I would question the materiality  
5 of differences of fractions of seconds in response interval for a pre-  
6 ordering query when compared to the overall interval for ordering and  
7 provisioning which is measured in days.

8  
9 Q. ON PAGES 12-13, MS. KINARD PROPOSES LEVELS OF PRODUCT  
10 DISAGGREGATION. ARE THE LEVELS OF PRODUCT  
11 DISAGGREGATION INCLUDED IN THE BELL SOUTH SQM  
12 APPROPRIATE?

13  
14 A. Yes. The 1996 Act requires BellSouth to produce Performance  
15 Measurements that permit regulatory bodies to monitor non-discriminatory  
16 access. It was not the intent of the Act or the FCC to have measurements  
17 for each and every process or sub-process, for each and every product, at  
18 the lowest geographic level, each month. The FCC provided guidance on  
19 the number of measures in the NPRM when it stated that the "requirement  
20 for performance measurements should be to balance the goal of detecting  
21 discrimination with the goal of minimizing the burden on the local  
22 exchange carrier." (CC Docket 98-56, Para 36) Furthermore, BellSouth  
23 reports on approximately 8,000 performance measurement results each

1 month at the state level. The additional product disaggregation, proposed  
2 by MCI WorldCom, will result in even more numbers. In considering  
3 additional product disaggregation and/or new measurements, the  
4 Authority must consider if even more results will clarify or hinder the  
5 Authority's ability to detect non-discriminatory access. Moreover, the  
6 representative levels of product disaggregation, identified by Ms. Kinard  
7 on page 13 of her testimony, are already included in BellSouth's SQM  
8 product disaggregation. Therefore, it is not clear where the real dispute  
9 on this issue lies.

10

11 Q. AS PROPOSED BY MS. KINARD ON PAGE 13 OF HER TESTIMONY, IS  
12 DISAGGREGATION BY ORDERING ACTIVITY NECESSARY?

13

14 A. No. Although BellSouth's SQMs already report separately on Local  
15 Number Portability, as suggested by Ms. Kinard, to further disaggregate  
16 by type of service order, e.g. new installations and migrations with and  
17 without changes, is unnecessary. BellSouth furnishes the CLECs with the  
18 raw data for its provisioning measurements every month. If MCI  
19 WorldCom wants to further disaggregate provisioning measurements by  
20 type of order, they have the necessary data to do just that. It is  
21 unnecessary to burden this Authority and all other CLECs with the  
22 additional volume of data created by ordering BellSouth to routinely  
23 produce this level of disaggregation.

1

2 Q. ON PAGE 14 OF HER TESTIMONY, MS. KINARD ASSERTS THAT  
3 BELLSOUTH SHOULD BE REQUIRED TO REPORT ON ITS  
4 PERFORMANCE IN TENNESSEE FOR EACH MEASUREMENT". HOW  
5 DO YOU RESPOND?

6

7 A. BellSouth has always maintained that certain of its OSSs are regional  
8 systems and incapable of producing state specific data. It is not  
9 necessary for these OSSs to produce state specific data since there is no  
10 state specific distinction built into these OSSs. All parties are treated  
11 equally by design.

12

13 Q. WHAT IS BELLSOUTH'S POSITION ON GEOGRAPHIC  
14 DISAGGREGATION BELOW THE STATE LEVEL, E.G. MSA?

15

16 A. As I previously testified, the 1996 Act requires BellSouth to produce  
17 Performance Measurements that permit regulatory bodies to monitor non-  
18 discriminatory access.

19

20 BellSouth reports on approximately 8,000 performance measurement  
21 results each month at the state level. These results would, at a minimum,  
22 triple if reporting were done at the MSA level. In considering additional  
23 geographic disaggregation below the state level, the Authority must

1 consider if even more results unnecessarily complicate the Authority's  
2 ability to detect non-discriminatory access.

3  
4 Q. IN RESPONSE TO MS. KINARD'S ALLEGATIONS ON PAGE 15  
5 REGARDING DISAGGREGATION BASED ON VOLUME CATEGORY,  
6 INTERFACE TYPE AND REASON FOR HELD ORDER, HOW DO YOU  
7 RESPOND?

8  
9 A. BellSouth's SQM already disaggregates by volume category, interface  
10 type and reason for held orders. I fail to understand why this has been  
11 raised as an issue in this proceeding.

12  
13 Q. IN SUMMARY, WHAT SHOULD THE TENNESSEE REGULATORY  
14 AUTHORITY CONSIDER WHEN EVALUATING MCI WORLDCOM'S  
15 POSITION ON DISAGGREGATION?

16  
17 A. As stated previously, BellSouth already produces approximately 8,000  
18 data elements each month, just at the state level and just for CLEC and  
19 retail aggregate. If the Authority adopted the additional disaggregation,  
20 proposed by MCI WorldCom, these numbers would increase by orders of  
21 magnitude. Hundreds of thousands of numbers could result. How many  
22 sets of numbers and data does the Authority need to assess  
23 performance?

22  
23

Q. ON PAGES 16-17, MS. KINARD TESTIFIED ABOUT MCI WORLDCOM'S APPROACH TO ANALOGS, BENCHMARKS AND STANDARDS. DO YOU AGREE?

A. BellSouth agrees with Ms. Kinard regarding the necessity for analogs, benchmarks and standards. However, BellSouth does not agree that it is appropriate to use only benchmarks as suggested by Ms. Kinard on page 16, lines 15-16. Where there are analogous or nearly analogous processes, retail analogs are more appropriate for measuring parity. BellSouth has proposed a set of Retail Analogs and Benchmarks based on an examination of data produced over the past several years. Most measures are based on proposed retail analogs. BellSouth's position evolved during the Louisiana workshops from proposing retail analogs only for resale products to a comprehensive proposal offering a retail analog or benchmark for almost every measure. BellSouth believes that appropriate analogs or benchmarks must be based on data produced by the processes in BellSouth. These analogs and/or benchmarks fairly balance the interest of the CLECs, the Authority and BellSouth. Therefore, BellSouth strongly recommends that the BellSouth proposed analogs and benchmarks become the performance standards adopted by this Authority.

1 Q. DO YOU CONCUR WITH MS. KINARD'S TESTIMONY REGARDING  
2 STATISTICAL METHODOLOGY ON PAGES 17-18?

3

4 A. No. Statistical testing should only be required in assessing the  
5 performance of the key measurements included in the BellSouth VSEEM  
6 plan. It is not necessary to conduct statistical testing on other  
7 performance measurement data since disparate treatment would be  
8 captured in the set of VSEEM measurements. For statistical testing of the  
9 VSEEM measures, BellSouth urges this Authority to adopt the alternative  
10 statistical method that evolved during the Louisiana Workshops, the  
11 truncated z methodology. This methodology was jointly developed by  
12 BellSouth statisticians and statisticians representing MCI WorldCom. It is  
13 superior to the modified z methodology. Furthermore, BellSouth believes  
14 that a statistical methodology should only be applied to those  
15 measurements containing a retail analog, which are included in the  
16 BellSouth remedy plan, VSEEM III.

17

18 Q. DOES BELLSOUTH CONCUR WITH THE BASIC COMPONENTS OF A  
19 REMEDY MODEL THAT MS. KINARD IDENTIFIES ON PAGE 19?

20

21 A. Yes

22

1 Q. DOES BELL SOUTH'S PROPOSED REMEDY PLAN, VSEEM III,  
2 INCLUDE ALL FIVE OF THESE COMPONENTS?

3

4 A. Yes. BellSouth strongly urges this Authority to adopt BellSouth's  
5 proposed VSEEM III remedy plan if this Authority deems it necessary to  
6 order a remedy plan as part of this proceeding.

7

8 Q. WHAT IS BELL SOUTH'S POSITION ON AUDITING PERFORMANCE  
9 MEASUREMENTS?

10

11 A. BellSouth's Service Quality Measurements, Appendix C, sets forth  
12 BellSouth's position on auditing performance measurements. This  
13 position provides the Authority with sufficient auditing capability to  
14 conclude that BellSouth is meeting its obligations under the Act. Under  
15 MCI WorldCom's proposal, given the number of CLECs with whom  
16 BellSouth has interconnection agreements, BellSouth would potentially  
17 have to conduct hundreds of audits each year, at significant cost.  
18 BellSouth's proposal balances the need to provide CLECs with the ability  
19 to audit performance data with the need to keep the process manageable,  
20 efficient, and cost-effective.

21

1 Q. ON PAGE 20 OF HER TESTIMONY, MS. KINARD SUGGESTS THAT  
2 "BELLSOUTH SHOULD PAY FOR THE FIRST TWO AUDITS FOR A  
3 SIMILAR PROCESS? DO YOU AGREE?  
4

5 A. No. As stated in Appendix C of BellSouth's SQM, BellSouth proposes that  
6 50% of the cost be borne by BellSouth and 50% by the CLEC(s) and that  
7 an audit be conducted each year for the next 5 years.  
8

9 Q. DOES THIS CONCLUDE YOUR TESTIMONY?  
10

11 A. Yes

AFFIDAVIT

STATE OF: Georgia  
COUNTY OF: Fulton

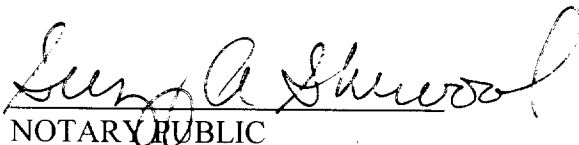

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared David A. Coon – Director – Interconnection Services, BellSouth Telecommunications Inc., who, being by me first duly sworn deposed and said that:

He is appearing as a witness before the Tennessee Regulatory Authority in Docket No. 00-00309 on behalf of BellSouth Telecommunications, Inc., and if present before the Authority and duly sworn, his testimony would be set forth in the annexed testimony consisting of 19 pages and 0 exhibit(s).

David A. Coon

BELLSOUTH TELECOMMUNICATIONS, INC.  
REBUTTAL TESTIMONY OF RONALD M. PATE  
BEFORE THE TENNESSEE REGULATORY AUTHORITY  
DOCKET NO. 00-00309  
December 13, 2000

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELLSOUTH  
TELECOMMUNICATIONS, INC. AND YOUR BUSINESS ADDRESS.

A. My name is Ronald M. Pate. I am employed by BellSouth  
Telecommunications, Inc. ("BellSouth") as a Director, Interconnection  
Services. In this position, I handle certain issues related to local  
interconnection matters, primarily operations support systems ("OSS").  
My business address is 675 West Peachtree Street, Atlanta, Georgia  
30375.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS DOCKET?

A. Yes. I filed direct testimony on December 6, 2000.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

1 A. The purpose of my testimony is to rebut the direct testimony of Mr. Don  
2 Price and Ms. Sherry Lichtenberg of MCImetro Access Transmission  
3 Services, LLC and MCI WORLDCOM Communications, Inc. ("MCI  
4 WorldCom"). Specifically, my comments respond to their direct testimony  
5 regarding Issues Nos. 1, 80, and 81.

6

7 ***Issue 1: Should the electronically ordered NRC apply in the event an order***  
8 ***is submitted manually when electronic interfaces are not available***  
9 ***or not functioning within specified standards or parameters?***  
10

11 Q. PAGE 4 , LINE 7 OF MR. PRICE'S TESTIMONY SUGGESTS THAT  
12 BELL SOUTH IS DISCRIMINATING AGAINST CLECs BY PROVIDING  
13 ELECTRONIC ORDERING PROCESSES FOR ITS OWN RETAIL  
14 OPERATIONS WHILE REQUIRING CLECS TO ORDER THE SAME  
15 PRODUCTS AND SERVICES MANUALLY. DO YOU AGREE?

16

17 A. No. As stated in my direct testimony, neither MCI WorldCom's petition nor  
18 Mr. Price's direct testimony offers any specific information to support his  
19 suggestion that BellSouth is acting in a discriminatory manner, and I  
20 disagree strongly with this claim. I am not aware of any situation of the  
21 type described by Mr. Price on line 8 of his Direct testimony: " If BellSouth  
22 uses electronic processes for its own OSS and does not provide electronic  
23 processes to its competitors to obtain what amounts to substantially the  
24 same elements or services, it is not providing parity." Indeed, in other

1 proceedings, the only example which Mr. Price cited concerned the use of  
2 the Access Service Request ("ASR") to order EELs. This is not an issue  
3 of discrimination against MCI, but an example of MCI's desire to be  
4 treated differently than other CLECs. Moreover, the issue raised by Mr.  
5 Price is the same issue identified as Issue 80 in this proceeding discussed  
6 below.

7  
8 Q. MR. PRICE, ON PAGE 4, LINES 21-22, OF HIS DIRECT TESTIMONY,  
9 STATES "BELLSOUTH SHOULD NOT BE ENCOURAGED TO USE  
10 INEFFICIENT, COSTLY SYSTEMS TO SERVE CLECS ...". PLEASE  
11 COMMENT.

12  
13 A. Again, I disagree strongly with the implication of Mr. Price's statement that  
14 BellSouth uses "inefficient costly systems to serve CLECs" which is not  
15 the case. BellSouth has provided the CLECs efficient, cost effective and  
16 non-discriminatory access to its operations support systems ("OSS") for  
17 pre-ordering, ordering, provisioning, maintenance and repair, and billing  
18 through robust and reliable manual and electronic interfaces. The  
19 electronic interfaces are: Local Exchange Navigation System ("LENS"),  
20 Telecommunications Access Gateway ("TAG"), RoboTAG™, Electronic  
21 Data Interchange ("EDI"), Trouble Analysis and Facilitation Interface  
22 ("TAFI"), Electronic Communications Trouble Administration ("ECTA"),

1 Optional Daily Usage File ("ODUF"), Enhanced Optional Daily Usage File  
2 ("EODUF"), and Access Daily Usage File ("ADUF").  
3

4 The interfaces for CLECs provide a full range of options from which to  
5 choose including integratable machine-to-machine interfaces,  
6 human-to-machine interfaces and manual interfaces. For whatever  
7 reason, MCI WorldCom has chosen to use the manual interfaces for UNE  
8 and resale services, even when MCI WorldCom could submit these orders  
9 electronically. In spite of the availability of electronic interface capability,  
10 MCI WorldCom does not utilize these efficient and cost effective means to  
11 submit their local service requests.  
12

13 ***Issue 80: Should BellSouth be required to provide an application to***  
14 ***application access service order inquiry process?***  
15

16 Q. ON PAGE13, LINES 9-19, OF HER DIRECT TESTIMONY, MS.  
17 LICHTENBERG IMPLIES THAT MCI WORLDCOM HAS USED ACCESS  
18 SERVICE REQUESTS ("ASRs") TO ORDER UNBUNDLED NETWORK  
19 ELEMENTS, SUCH AS ENHANCED EXTENDED LOOPS ("EELs"). IS  
20 MS. LICHTENBERG CORRECT?  
21

22 A. No. Notwithstanding any claim by Ms. Lichtenberg to the contrary, MCI  
23 WorldCom is not submitting an ASR to order EELs or any other unbundled

1 network elements. Prior to September 2000, MCI WorldCom was ordering  
2 Special Access service from an end user's location to the MCI WorldCom  
3 switch. BellSouth was provisioning and installing Special Access and then  
4 manually crediting MCI WorldCom monthly with the difference between  
5 Special Access and UNE rates. After September 2000, BellSouth no  
6 longer accepts ASRs submitted electronically for EELs or special access  
7 conversions. In order to correctly provision EELs, it is necessary for MCI  
8 WorldCom to submit its requests using the Local Service Request ("LSR")  
9 process in accordance with the Unbundled Dedicated Transport – EELs  
10 CLEC Information Package dated May 15, 2000 and posted on the  
11 BellSouth Website.

12  
13 Q. MS. LICHTENBERG STATES ON PAGE 13, LINES 2-4, "SUCH AN  
14 APPLICATION-TO-APPLICATION INQUIRY IS NEEDED TO OBTAIN  
15 PRE-ORDER INFORMATION ELECTRONICALLY FOR UNEs  
16 ORDERED VIA AN ACCESS SERVICE REQUEST AND SHOULD BE  
17 PROVIDED." PLEASE COMMENT.

18  
19 A. Ms. Lichtenberg's claim that MCI WorldCom needs an ASR interface in  
20 order " to obtain pre-order information electronically for UNEs..." is wrong  
21 and misleading. The Local Service Request is the industry-defined means  
22 of ordering UNEs, not the ASR process. Each UNE offered by BellSouth  
23 can be ordered via an LSR, and MCI WorldCom need not utilize an ASR

1 to order any UNE, as Ms. Lichtenberg suggests. In fact, MCI WorldCom is  
2 placing its service requests for UNEs via the LSR and Its Access Service  
3 Requests via the ASR with satisfactory and expected results. Therefore,  
4 the requirement for an application-to-application inquiry for UNEs ordered  
5 via an ASR does not exist.

6  
7 Q. HAS THE FCC EXPRESSED ITS VIEW ON THE USE OF THE ASR FOR  
8 ORDERING EELs?

9  
10 A. Yes. In the FCC's Third Report and Order and the Supplemental Order  
11 Clarification that followed, the FCC advised that the ASR process was one  
12 method of ordering of EELs, and the conversion of Special Access service  
13 to UNEs. In paragraph 298 of the Third Report and Order, the FCC states:  
14 "If the EEL is available and a requesting carrier seeks to serve a high  
15 volume business, the incumbent LEC can provision the high capacity loop  
16 and connect directly to a requesting carrier's collocation cage." MCI  
17 WorldCom is not requesting that high capacity loops be connected directly  
18 to its collocation space. MCI WorldCom is ordering Special Access  
19 service from an end user's location to the MCI WorldCom switch.  
20 Footnote 581 in FCC98-238 states: "Furthermore, requesting carriers and  
21 incumbent LECs have developed routine provisioning processes to deploy  
22 the EEL using the ASR process, and thus requesting carriers will not face  
23 delays and costs to integrate the EEL into their networks." This footnote

1 does not require BellSouth to provision these types of loops using an ASR  
2 process. It simply observes that the ASR process is one method for the  
3 provision of EELs.

4

5 Q. DOES AN APPLICATION-TO-APPLICATION PRE-ORDERING  
6 INTERFACE EXISTS FOR LSRs?

7

8 A. Yes. BellSouth provides CLECs with access to the same pre-ordering,  
9 ordering and provisioning OSS accessed by BellSouth's retail  
10 organizations through the machine-to-machine Telecommunications  
11 Access Gateway ("TAG") electronic interface. BellSouth supplies CLECs  
12 with all the specifications necessary for integrating the pre-ordering  
13 functionality of TAG with the ordering functionality of other electronic  
14 interfaces. A CLEC may integrate the TAG pre-ordering interface with the  
15 Electronic Data Interchange ("EDI") ordering interface or with the TAG pre-  
16 ordering with TAG ordering. CLECs interested in integrating the pre-  
17 ordering and ordering functionality of the interfaces have responsibility for  
18 performing that integration.

19

20 Q. CAN THE TAG PRE-ORDERING INTERFACE BE INTEGRATED WITH  
21 AN ASR?

22

1 A. Yes. MCI WorldCom would have to do the integration on their side of the  
2 interface. Thus, what MCI WorldCom is requesting in an application-to-  
3 application interface for access service requests for local services already  
4 exist. However, once again, the ASR is not the mechanism for ordering  
5 local services.

6

7 **Issue 81: Should BellSouth provide a service inquiry process for local**  
8 **services as a preordering function?**

9

10 Q WHAT IS MCI WORLDCOM REQUESTING THROUGH THIS ISSUE?

11

12 A. MCI WorldCom is asking for manual and electronic SI processes for the  
13 pre-ordering of local services that would indicate whether facilities are  
14 available to serve an end user, information regarding redundancy, and  
15 possibly other information to be specified by MCI WorldCom. Ms.  
16 Lichtenberg's direct testimony, Page 15, lines 12-19, describes her  
17 request for the service inquiry process as enabling MCI' WorldCom's sales  
18 force in selling to MCI WorldCom customers.

19

20 Q. IS MCI WORLDCOM'S REQUEST A FUNCTION OF PRE-ORDERING  
21 AS DEFINED BY THE FCC?

22

23 A. No. According to the Commission's Interconnection Rules ( at §51.5) pre-  
24 ordering and ordering are defined collectively as including, "the exchange

1 of information between telecommunications carriers about current or  
2 proposed customer products and services, or unbundled network  
3 elements, or some combination thereof.” Pre-ordering typically consists of  
4 obtaining access to the following information and functions :

- 5 • Street address validation
- 6 • Telephone number selection
- 7 • Availability of service and features
- 8 • Due date information
- 9 • Customer service record information
- 10 • Loop makeup information

11  
12 Pre-ordering deals with the collection of information necessary to populate  
13 an order for resale or UNEs. MCI WorldCom's request deals with the  
14 gathering of data to have assurance of facilities availability for the purpose  
15 of developing sales proposals. That was not contemplated by the Act and  
16 as such BellSouth has no statutory requirement to provide such.

17  
18 Q. IS BELLSOUTH NECESSARILY OPPOSED TO PROVIDING MCI  
19 WORLDCOM WITH A SERVICE INQUIRY PROCESS THAT WOULD  
20 ENABLE MCI WORLDCOM TO GATHER INFORMATION TO DEVELOP  
21 SALES PROPOSALS?

1 A. No. Even though BellSouth is not required to develop the process  
2 proposed by MCI WorldCom, BellSouth has no objection to this issue  
3 being considered by the industry through the Change Control Process  
4 ("CCP"). The CCP is the process by which BellSouth and participating  
5 CLECs manage requested changes to the BellSouth Local Interfaces, the  
6 introduction of new interfaces, and the identification and resolution of  
7 issues related to Change Requests. This process covers Change  
8 Requests initiated by both BellSouth and CLECs that affect external users  
9 of BellSouth's electronic interface applications and/or, associated manual  
10 processes.

11

12 BellSouth and representatives of the CLECs will meet to review, prioritize,  
13 and make recommendations for candidate Change Requests. Through  
14 this process the input from all interested CLECs is considered and the  
15 decisions that result will best serve the CLEC community as a whole.

16 The CCP process is described in the BellSouth Website:

17 [http://www.interconnection.bellsouth.com/markets/lec/ccp\\_live/ccp.html](http://www.interconnection.bellsouth.com/markets/lec/ccp_live/ccp.html)

18

19 The CLEC industry should have the opportunity to decide whether MCI  
20 WorldCom's proposed service inquiry process would be beneficial to  
21 promoting local competition and the extent to which this process should be  
22 given priority over other changes to BellSouth's interfaces currently under  
23 discussion.

1

2 Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

3

4 A. Yes.

5

6

AFFIDAVIT

STATE OF: Georgia  
COUNTY OF: Fulton

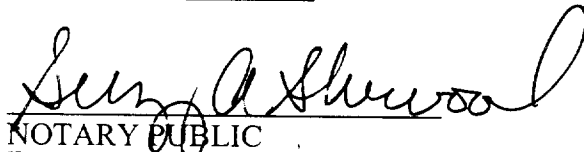

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared Ron M. Pate – Director – Interconnection Services, BellSouth Telecommunications Inc., who, being by me first duly sworn deposed and said that:

He is appearing as a witness before the Tennessee Regulatory Authority in Docket No. 00-00309 on behalf of BellSouth Telecommunications, Inc., and if present before the Authority and duly sworn, his testimony would be set forth in the annexed testimony consisting of 11 pages and 0 exhibit(s).

NOTARY PUBLIC

BELLSOUTH TELECOMMUNICATIONS, INC.  
REBUTTAL TESTIMONY OF DAVID P. SCOLLARD  
BEFORE THE TENNESSEE REGULATORY AUTHORITY  
DOCKET NO. 00-00309  
DECEMBER 13, 2000

Q. PLEASE STATE YOUR NAME, ADDRESS, AND POSITION WITH  
BELLSOUTH TELECOMMUNICATIONS, INC.

A. I am David P. Scollard, Room 26D3, 600 N. 19th St., Birmingham, AL 35203.  
My current position is Manager, Wholesale Billing at BellSouth Billing, Inc., a  
wholly owned subsidiary of BellSouth Telecommunications, Inc.

Q. ARE YOU THE SAME DAVID SCOLLARD THAT FILED DIRECT  
TESTIMONY IN THIS PROCEEDING?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS  
PROCEEDING?

My rebuttal testimony will respond to the direct testimony of MCI witnesses on  
issues 42, 75 and 95.

1    *Issue 42: Should MCI WorldCom be permitted to offer tandem services for*  
2    *switched access service?*

3

4    Q.     WHAT IS BELLSOUTH'S UNDERSTANDING OF THIS ISSUE?

5

6    A.     BellSouth's understanding of this issue is that MCI wants to send access traffic  
7           to BellSouth across the local interconnection facilities provided by BellSouth  
8           for completion. BellSouth's position is that access traffic should be kept  
9           separate from local traffic and therefore, MCI's access traffic should be sent  
10          only across access facilities.

11

12   Q.     WHAT BILLING IMPACTS WOULD BE SEEN IF MCI'S POSITION IS  
13          ADOPTED?

14

15   A.     Generally, the result would be that BellSouth would be unable to accurately  
16          bill MCI for the access traffic. Each type of interconnection facility carries with  
17          it unique characteristics with regard to the recording of billing data for calls  
18          going across that facility. The plain truth is that when MCI sends a call across  
19          its local interconnection trunks, it is recorded in BellSouth's network as just  
20          that – a call originated from MCI's local customer and sent to BellSouth.  
21          Therefore, BellSouth can not distinguish this access traffic from the other local  
22          traffic based on the call records. BellSouth would then be forced to factor the  
23          access traffic using the Percent Local Usage (PLU) factors to determine what  
24          should be billed. This subjects more traffic to the factors than currently is the  
25          case which leads to greater inaccuracies in the bills to MCI.

1

2

3 Q. WHAT DOES BELL SOUTH WANT THIS AUTHORITY TO DO  
4 REGARDING THIS ISSUE?

5

6 A. BellSouth is asking the Authority to adopt BellSouth's position that MCI be  
7 required to continue to separate its access traffic from its local traffic.

8

9 *Issue 75: For end users served by INP should the end user or the end-user's local*  
10 *carrier be responsible for paying the terminating carrier for collect calls, third party*  
11 *billed calls or other operator assisted calls?*

12

13 Q. ON PAGES 68 AND 69 OF HIS DIRECT TESTIMONY MCI WITNESS  
14 PRICE STATES THAT INDUSTRY PRACTICE IS FOR TOLL CARRIERS  
15 TO BILL INP END USERS DIRECTLY FOR COLLECT OR THIRD  
16 NUMBER BILLED CALLS. IS THIS TRUE?

17

18 A. No. As stated in my direct testimony, the industry mechanisms that support the  
19 billing of collect and third number billed calls were not redesigned to handle  
20 billing in the manner claimed by MCI. One of the reasons for this is that INP  
21 was, is, and shall always be a short term product. The fact that MCI can serve  
22 these types of customers using LNP, the permanent portability service, from  
23 the vast majority of BellSouth's switches in the state of Tennessee is testimony  
24 to the wisdom the industry used in deciding to leave the existing mechanisms  
25 unchanged. While it may be true, as Mr. Price states, that IXCs bill end users

1 directly at times, this is not relevant to the types of calls addressed by this  
2 issue. The calls at issue here are calls that a local exchange company has  
3 carried on behalf of a customer of another local exchange company. In the  
4 industry, these calls are billed via message exchange processes between the  
5 companies and not directly to the end user. BellSouth's proposal complies with  
6 the arrangements and infrastructures designed by the industry.

7

8 ***Issue 95: Should BellSouth be required to provide MCI with billing records with all***  
9 ***EMI standard fields?***

10

11 Q. ON PAGE 71 OF HIS DIRECT TESTIMONY, MR. PRICE STATES THAT  
12 MCI IS ENTITLED TO BILLING INFORMATION IN THE INDUSTRY  
13 STANDARD RECORD FORMATS. IS BELLSOUTH AGREEING TO  
14 PROVIDE THESE RECORDS TO MCI?

15

16 A. Yes. BellSouth has proposed contract language stating that it will continue to  
17 use the industry developed EMI formats on all of the usage records provided to  
18 MCI. In addition, the language goes on to specifically state which of the EMI  
19 records will be provided and how those records are to be sent. BellSouth's  
20 position is that the language proposed by MCI is unclear, confusing and does  
21 not describe in sufficient detail the manner in which the records will be  
22 provided. For this reason, BellSouth's language should be adopted for this  
23 issue.

24

25 Q. DOES THIS CONCLUDE YOUR TESTIMONY?

1

2 A. Yes.

Suzy A. Sherwood  
NOTARY PUBLIC

BELLSOUTH TELECOMMUNICATIONS, INC.  
REBUTTAL TESTIMONY OF CYNTHIA K. COX  
BEFORE THE TENNESSEE REGULATORY AUTHORITY  
DOCKET NO. 00-00309  
DECEMBER 13, 2000

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELLSOUTH TELECOMMUNICATIONS, INC. ("BELLSOUTH") AND YOUR BUSINESS ADDRESS.

A. My name is Cynthia K. Cox. I am employed by BellSouth as Senior Director for State Regulatory for the nine-state BellSouth region. My business address is 675 West Peachtree Street, Atlanta, Georgia 30375.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony and four exhibits on December 6, 2000.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to the direct testimony of witnesses for MCImetro Access Services, LLC ("MCI") and Brooks Fiber Communications of Tennessee, Inc. ("Brooks Fiber"), collectively referred to as "MCI WorldCom", with the Tennessee Regulatory Authority ("TRA" or "Authority") on December 6, 2000. I address the following issues in my

1           rebuttal testimony: 1, 3, 6,18, 22, 23, 28, 34-36, 39, 40, 42, 45-48, 51, 52, 54,  
2           67, 94, and 107-110.

3

4   ***Issue 1: Should the electronically ordered NRC apply in the event an order is***  
5   ***submitted manually when electronic interfaces are not available or not functioning***  
6   ***within specified standards or parameters??***

7

8   Q.     WHAT IS MCI WORLDCOM'S CURRENT POSITION ON THIS ISSUE?

9

10   A.     At page 3, Mr. Price states that MCI WorldCom should pay the electronic  
11           ordering charge in instances where BellSouth does not provide an electronic  
12           interface to Competitive Local Exchange Carriers ("CLECs"), but provides  
13           electronic ordering for itself. In other words, Mr. Price appears to concede that  
14           manual ordering charges apply when no electronic ordering capability exists  
15           for either BellSouth or CLECs. However, MCI WorldCom's proposed  
16           contract language does not reflect the position described in Mr. Price's  
17           testimony. MCI WorldCom's contract language states that MCI WorldCom  
18           would pay the electronic ordering charge when electronic interfaces "are not  
19           available". The language should make clear that electronic ordering charges  
20           apply when an electronic interface is provided by BellSouth and MCI  
21           WorldCom submits its order electronically.

22

23           BellSouth's position on this issue is clearly reflected in its proposed language,  
24           which is included in page 3 of my direct testimony. Based on BellSouth's  
25           proposed language, if BellSouth provides an electronic interface, and an order

1 is submitted electronically, an electronic ordering charge will apply. If  
2 BellSouth provides an electronic interface, and an order is submitted manually,  
3 a manual ordering charge will apply. If BellSouth does not provide an  
4 electronic interface, manual ordering charges apply for any submitted orders.  
5 However, as the parties have agreed in Issue 86, if the electronic interface is  
6 not functioning under specified circumstances, an electronic ordering charge  
7 would still apply on orders that would have been submitted electronically.

8

9 ***Issue 3: Should the resale discount apply to all telecommunication services***  
10 ***BellSouth offers to end users, regardless of the tariff in which the service is***  
11 ***contained?***

12

13 Q. MR. PRICE, AT PAGE 6, STATES THAT BELL SOUTH "SEEKS TO  
14 DISCRIMINATE AGAINST WORLDCOM BY DENYING IT THE RIGHT  
15 TO RESELL SERVICES INCLUDED IN BELL SOUTH'S FEDERAL AND  
16 STATE ACCESS TARIFFS, EVEN WHEN BELL SOUTH OFFERS THOSE  
17 SERVICES TO END USERS." HAS BELL SOUTH DENIED MCI  
18 WORLDCOM THE RIGHT TO RESELL ITS SERVICES?

19

20 A. No. MCI WorldCom has always been able to resell access services even  
21 before the Telecommunications Act of 1996 (the "1996 Act") was passed.  
22 BellSouth does not restrict MCI WorldCom's ability to resell access service.  
23 BellSouth, however, does not offer telecommunications services contained in  
24 its access tariffs at a wholesale discount. As I stated in my direct testimony,  
25 BellSouth's position is fully supported by the FCC, as outlined in paragraphs

1 873 and 874 of the FCC's First Report and Order in CC Docket No. 96-98  
2 ("Local Competition Order"). In its Order, the FCC specifically exempted  
3 exchange access services from the wholesale discount that applies to retail  
4 services under the 1996 Act.

5

6 ***Issue 6: Should BellSouth be directed to perform, upon request, the functions***  
7 ***necessary to combine network elements that are ordinarily combined in its network?***

8

9 Q. WHAT IS BELL SOUTH'S POSITION ON THIS ISSUE?

10

11 A. As I stated in my direct testimony, BellSouth will make combinations of UNEs  
12 available to MCI WorldCom consistent with BellSouth's obligations under the  
13 1996 Act and applicable FCC rules.

14

15 Q. ON PAGES 13-14, MR. PRICE QUOTES THE TRA'S "SECOND COST  
16 ORDER" AS REQUIRING BELL SOUTH TO PROVIDE TO CLECS ANY  
17 COMBINATIONS THAT BELL SOUTH PROVIDES TO ITSELF  
18 ANYWHERE IN ITS NETWORK. PLEASE COMMENT.

19

20 A. Mr. Price's quote is from the order issued on November 22, 2000, but  
21 documents the TRA's decisions at the Authority Conference on April 25, 2000.  
22 This order is an interim order addressing additional adjustments to be made in  
23 the parties' cost studies and adopting deaveraged proxy prices for UNE loops  
24 until such time as deaveraged permanent prices for UNEs are established. A  
25 final order has not yet been issued.

21  
22  
23  
24  
25

The footnote which Mr. Price quotes is, at best, an indirect reference to this issue. We do not believe that the statement in the footnote reflects a decision by the Authority on this important issue. Indeed, the Authority decided this issue in the NEXTLINK arbitration (Docket No. 98-00123, Order dated May 18, 1999), finding that incumbent LECs are not required to combine unbundled network elements for CLECs. As noted in my direct testimony, the Authority should find that BellSouth is not obligated to combine UNEs for CLECs such as MCI WorldCom.

Q. PLEASE COMMENT ON MR. PRICE’S RELIANCE ON AN ORDER BY THE GEORGIA PUBLIC SERVICE COMMISSION TO SUPPORT MCI WORLDCOM’S POSITION ON THIS ISSUE?

A. Yes. On pages 14 - 15, Mr. Price quotes from the Georgia Public Service Commission’s Order in Docket No. 10692-U to support his claim that BellSouth should combine UNEs for CLECs, even when such elements are not already combined. Mr. Price, however, fails to mention a critical aspect of the Georgia Commission’s Order. The Georgia Commission stated that “if the Eighth Circuit Court of Appeals determines that ILECs have no legal obligation to combine UNEs under the Federal Act, the Commission will reevaluate its decision with regard to the requirement that BellSouth provide combinations of typically combined elements where the particular elements being ordered are not actually physically connected at the time the order is placed.” (Order at page 22) The Court determined that BellSouth has no legal

1 obligation to combine UNEs for CLECs. In light of the Eighth Circuit's  
2 ruling, BellSouth fully anticipates that the Georgia Commission will reevaluate  
3 its decision and modify its ruling consistent with the Eighth Circuit's ruling.  
4

5 *Issue 18: Is BellSouth required to provide all technically feasible unbundled*  
6 *dedicated transport between locations and equipment designated by WorldCom so*  
7 *long as the facilities are used to provide telecommunications services, including*  
8 *interoffice transmission facilities to network nodes connected to WorldCom switches*  
9 *and to switches or wire centers of other requesting carriers?*  
10

11 Q. AT PAGES 21-22, MR. PRICE SUGGESTS THAT THE FCC SUPPORTS  
12 MCI WORLDCOM'S POSITION ON THIS ISSUE. DO YOU AGREE?  
13

14 A. No. Mr. Price quotes from the FCC's Third Report and Order in CC Docket  
15 96-98 ("UNE Remand Order") at paragraph 346 in an attempt to support MCI  
16 WorldCom's position that BellSouth must provide dedicated interoffice  
17 transport between MCI WorldCom switching locations and between MCI  
18 WorldCom's network and another requesting carrier's network. However,  
19 paragraph 346 does not require that an ILEC provide, let alone construct,  
20 dedicated transport for a CLEC between points designated by the CLEC. All  
21 paragraph 346 does is support the FCC's decision to require unbundled  
22 transport that already exists in BellSouth's network.  
23

24 Q. DID THE EIGHTH CIRCUIT'S JULY 18, 2000 RULING ADDRESS THIS  
25 ISSUE?

1

2 A. Yes. As noted in my direct testimony, the Eighth Circuit speaks to this issue in  
3 its ruling vacating the FCC's use of a hypothetical network standard for  
4 purposes of its pricing rules. In its discussion, the Eighth Circuit notes that it  
5 is the ILECs' existing networks that are to be made available to CLECs.  
6 Specifically, in striking down a hypothetical network cost, the Court stated,  
7 "[i]t is the cost to the ILEC of providing its existing facilities and equipment  
8 either through interconnection or by providing the specifically requested  
9 existing network elements that the competitor will in fact be obtaining for use  
10 that must be the basis for the charges." [Emphasis added]

11

12 Based on the foregoing, BellSouth encourages the Authority to determine, just  
13 as the FCC and the Eighth Circuit have, that BellSouth is only obligated to  
14 unbundle its existing network. BellSouth is not required to provide dedicated  
15 transport between MCI WorldCom locations and MCI WorldCom's network  
16 and the networks of other carriers.

17

18 Q. DOES THIS ISSUE ALSO HAVE IMPLICATIONS FOR REQUESTS FOR  
19 INTERCONNECTION?

20

21 A. Yes. If MCI WorldCom's request for dedicated transport is, in reality, a  
22 request for interconnection, the Eighth Circuit has spoken to that issue as well.  
23 Interconnection facilities are facilities between two carriers that provide for the  
24 exchange of traffic between those carriers. UNE transport is leased to a CLEC  
25 by an ILEC for use by a CLEC in carrying traffic within the CLEC's network.

1 The Eighth Circuit, however, does not distinguish between interconnection  
2 facilities and UNE transport with respect to construction of new facilities.  
3 Specifically, the Eighth Circuit noted that the Act “requires an ILEC to (1)  
4 permit requesting new entrants (competitors) in the ILEC’s local market to  
5 interconnect with the ILEC’s *existing* local network...” (page 2, emphasis  
6 added)

7  
8 Q. MR. PRICE’S DISCUSSION ON PAGES 19-22 STATES MCI  
9 WORLDCOM’S POSITION THAT BELL SOUTH SHOULD PROVIDE  
10 CONNECTIONS BETWEEN NODES ON MCI WORLDCOM’S  
11 NETWORK. PLEASE COMMENT.

12  
13 A. As I stated earlier, the FCC only requires BellSouth to unbundle dedicated  
14 transport in BellSouth’s existing network and has specifically excluded  
15 transport between other carriers’ locations. As noted in my direct testimony,  
16 paragraph 440 of the FCC’s Local Competition Order only requires that ILECs  
17 provide dedicated transport between LEC central offices or between LEC  
18 offices and those of competing carriers. It is highly unlikely that BellSouth  
19 will have existing facilities directly between two points on MCI WorldCom’s  
20 network or between MCI WorldCom’s network and the network of another  
21 carrier other than BellSouth. In the unlikely event BellSouth has dedicated  
22 transport that currently exists for BellSouth’s use between points on MCI  
23 WorldCom’s network where MCI WorldCom is requesting dedicated transport,  
24 BellSouth will provide MCI WorldCom access to those facilities.

25

1 *Issue 22: Should the interconnection agreement contain WorldCom's proposed*  
2 *terms addressing line sharing, including line sharing in the UNE-P and unbundled*  
3 *loop configurations?*

4

5 Q. HAS BELLSOUTH PROPOSED CONTRACT TERMS FOR LINE  
6 SHARING?

7

8 A. Yes. BellSouth has proposed contract terms for line sharing to MCI  
9 WorldCom. BellSouth believes the Authority should adopt BellSouth's  
10 proposed language. This proposed language is the product of numerous  
11 meetings between CLECs and BellSouth in which MCI WorldCom was invited  
12 to participate, and it covers both line sharing and loop qualification.

13

14 Q. DOES MR. PRICE DISCUSS THE ASPECT OF THE DISPUTE THAT  
15 INCLUDES WHETHER BELLSOUTH PROVIDES LINE SHARING OVER  
16 THE UNE PLATFORM ("UNE-P")?

17

18 A. Yes. Mr. Price suggests the Authority adopt MCI WorldCom's language on  
19 this issue. However, MCI WorldCom's proposed language would place  
20 obligations upon BellSouth that have been flatly rejected by the FCC.  
21 BellSouth's position is that it has no such obligation. My direct testimony  
22 demonstrates that the FCC makes clear in its Third Report and Order in CC  
23 Docket No. 98-147 and Fourth Report and Order in CC Docket No. 96-98, as  
24 well as its Order in CC Docket No. 00-65 (SBC – Texas Section 271

25

1 Application) that ILECs are not required to provision line sharing over the  
2 UNE-P.

3

4 Q. MR. PRICE, AT PAGE 23, SAYS THE FCC REQUIRES BELLSOUTH TO  
5 "PROVISION UNE-P TO WORLDCOM IN A MANNER THAT PERMITS  
6 LINE SPLITTING BETWEEN WORLDCOM AND A DLEC." DO YOU  
7 AGREE?

8

9 A. Absolutely not. MCI WorldCom appears to be confusing line sharing with line  
10 splitting. As I stated with line sharing, the FCC specifically notes that the  
11 ILEC is the voice provider in such a situation. Line splitting is when CLECs  
12 provide both voice and data on a loop and port combination. This would be  
13 accomplished by BellSouth providing the CLEC with an unbundled loop and  
14 unbundled port delivered to the CLEC's collocation space. This is what is  
15 referred to by the FCC as line splitting. Line splitting is not accomplished via  
16 the UNE-P.

17

18 *Issue 23: Does WorldCom's right to dedicated transport as an unbundled network*  
19 *element include SONET rings?*

20

21 Q. DO YOU AGREE WITH MR. PRICE'S SUGGESTION, AT PAGE 28,  
22 THAT MCI WORLDCOM WOULD BE DENIED THE ABILITY TO  
23 COMPETE BECAUSE "MORE THAN 80% OF BELLSOUTH'S  
24 INTEROFFICE NETWORK CONSISTS OF FIBER FACILITIES IN A RING  
25 ARCHITECTURE"?

1

2 A. No. As I stated in my direct testimony, BellSouth provides DS1, DS3 or any  
3 other existing transport links on an unbundled basis throughout its existing  
4 network regardless of whether or not those links are provisioned over a  
5 SONET ring. Thus, Mr. Price's suggestion that MCI WorldCom would be  
6 denied the ability to compete because "more than 80% of BellSouth's  
7 interoffice network consists of fiber facilities in a ring architecture" is wrong  
8 because MCI WorldCom is not denied access to any existing transport  
9 facilities.

10

11 However, the FCC made clear that BellSouth has no obligation to provide  
12 unbundled access to SONET rings themselves. Because CLECs like MCI  
13 WorldCom have access to existing point-to-point transport regardless of  
14 whether the transport is provisioned over SONET rings, MCI WorldCom  
15 would have to show that it would be "impaired" without access to the entire  
16 SONET ring, which MCI WorldCom has not done.

17

18 Q. MR. PRICE CLAIMS, AT PAGE 28, THAT MCI WORLDCOM'S  
19 LANGUAGE "DOES NOT REQUIRE BELL SOUTH TO CONSTRUCT  
20 NEW FIBER FACILITIES." DO YOU AGREE?

21

22 A. No. Although MCI WorldCom's language contained in Mr. Price's testimony  
23 at page 26 purports to contend that BellSouth is not required to construct  
24 facilities where none currently exist, MCI WorldCom's language continues by  
25 obligating BellSouth to install electronics. Whether or not MCI WorldCom

1 wants BellSouth to construct new fiber facilities, it is clear from Mr. Price's  
2 testimony that MCI WorldCom wants BellSouth to "provide the electronics  
3 necessary to provide such dedicated transport to MCI WorldCom on existing  
4 facilities." Adding such necessary electronics involves construction at both  
5 ends of the fiber facility. This work constitutes construction of new facilities,  
6 which BellSouth is not obligated to do.

7  
8 *Issue 28: Should BellSouth provide the calling name database via electronic*  
9 *download, magnetic tape, or via similar convenient media?*

10  
11 Q. ON PAGE 29, MR. PRICE CLAIMS THAT MCI WORLDCOM REQUIRES  
12 A DOWNLOAD OF THE CALLING NAME DATABASE IN ORDER TO  
13 "PROVIDE A NUMBER OF SERVICES TO WORLDCOM'S CUSTOMERS,  
14 INCLUDING CALLER ID WITH NAME SERVICE." DO YOU AGREE?

15  
16 A. No. Providing Caller ID with name service does not require a download of the  
17 calling name database and MCI WorldCom has not identified any service it  
18 wants to provide that would require MCI WorldCom to have a download of the  
19 data as opposed to simply being able to access the data. In the MCI  
20 WorldCom arbitration hearing in North Carolina, when asked under cross  
21 examination to identify another service that would require a download of the  
22 database, Mr. Price was unable to do so.

23  
24 BellSouth offers access to its calling name database on a per query basis. The  
25 terminating switch initiates a query to a calling name database when a call is

1 received by an end user that subscribes to Caller ID with name service. This  
2 query is triggered based on the translations that appear on the terminating end  
3 user's line. When an MCI WORLDCOM end user with Caller ID with name  
4 service receives a call from an end user whose name is stored in BellSouth's  
5 calling name database, MCI WorldCom's switch launches a query to  
6 BellSouth's calling name database to retrieve the caller's name for display on  
7 the MCI WorldCom end user's display device. This same process occurs when  
8 the terminating end user is a BellSouth customer with Caller ID with name  
9 service. The access that BellSouth provides to its calling name database  
10 enables MCI to efficiently provide Caller ID with name services to its end  
11 users. BellSouth is fulfilling its obligations to provide unbundled access to its  
12 call-related databases as required by the Act and the FCC's rules. Nothing in  
13 any FCC order can reasonably be read to obligate BellSouth to provide an  
14 electronic download of any call-related database, including CNAM.

15

16 *Issues 34 and 35: Is BellSouth obligated to provide and use two-way trunks that*  
17 *carry each party's traffic?*

18

19 Q. WHAT IS BELLSOUTH'S POSITION ON THIS ISSUE?

20

21 A. BellSouth will install two-way trunks for MCI WorldCom's traffic if MCI  
22 WorldCom requests. The trunk equipment installed will provide two-way  
23 trunking. However, BellSouth is not obligated to put its traffic over those  
24 trunks unless volumes are too low to justify one-way trunks.

25

1 Q. ARE TWO-WAY TRUNKS MORE COST EFFICIENT THAN ONE-WAY  
2 TRUNKS AS MR. OLSON IMPLIES AT PAGE 3?

3

4 A. Not necessarily. BellSouth agrees that two-way trunks may be more efficient  
5 than one-way trunks under some circumstances. For this reason, BellSouth  
6 offers two-way trunk interconnection to CLECs in a variety of configurations.  
7 However, as I discussed in my direct testimony, two-way trunks are not always  
8 the most efficient due to busy hour characteristics and balance of traffic. If the  
9 traffic on the trunk group in both directions occurs in the same or similar busy  
10 hour, there will be few, if any, savings obtained by using two-way trunks  
11 versus one-way trunks. In addition, if the traffic is predominately flowing in  
12 one direction, there will be little or no savings in two-way trunks over one-way  
13 trunks. However, it should be noted that, in all cases, two-way trunks are more  
14 difficult to administer because they require more coordination of forecasts  
15 between the companies.

16

17 Q. HOW DOES BELLSOUTH RECOMMEND THE AUTHORITY RESOLVE  
18 THIS ISSUE?

19

20 A. BellSouth requests the Authority to adopt the BellSouth position on this issue  
21 and not require BellSouth to send its traffic over two-way trunks. The contract  
22 should allow the parties to reach mutual agreement on the use of two-way  
23 trunks on a case by case basis. This method has proven effective where  
24 BellSouth and other CLECs have addressed the provision of two-way trunks.

25

1 *Issue 36: Does WorldCom, as the requesting carrier, have the right pursuant to the*  
2 *Act, the FCC's Local Competition Order and the FCC regulations, to designate the*  
3 *network point (or points) of interconnection at any technically feasible point?*

4  
5 Q. WHAT IS THE ESSENCE OF THE DISPUTE BETWEEN THE PARTIES  
6 ON THIS ISSUE?

7  
8 A. As I stated in my direct testimony, in a nutshell, this issue is about whose  
9 customers should pay for the costs that MCI WorldCom creates as a result of  
10 its network design decisions. MCI WorldCom wants BellSouth's customers to  
11 bear those costs. Not surprisingly, BellSouth's position is that MCI  
12 WorldCom's customers should bear the costs of MCI WorldCom's decisions.  
13 All of the discussion concerning who gets to establish points of  
14 interconnection, how many points there will be, when reciprocal compensation  
15 applies to the facilities, etc. are simply a means to an end. And that end is  
16 whether customers that MCI WorldCom does not serve should bear the  
17 additional costs that result from MCI WorldCom's network design or whether  
18 MCI WorldCom's own customers should bear those costs. Although the  
19 processes required to implement the parties' positions concerning network  
20 interconnection are very complicated, the Authority only has to decide whether  
21 MCI WorldCom should bear the full costs of its network design.

22  
23 Q. HOW DOES THE FCC ADDRESS THE ISSUE OF ADDITIONAL COSTS  
24 CAUSED BY A CLEC'S CHOSEN FORM OF INTERCONNECTION?

25

1 A. As I noted in my direct testimony, in its First Report and Order in Docket 96-  
2 325, the FCC states that the CLEC must bear those costs. Paragraph 199 of the  
3 Order states that “a requesting carrier that wishes a ‘technically feasible’ but  
4 expensive interconnection would, pursuant to section 252(d)(1), be required to  
5 bear the cost of the that interconnection, including a reasonable profit.”  
6 Further, at paragraph 209, the FCC states that “Section 251(c)(2) lowers  
7 barriers to competitive entry for carriers that have not deployed ubiquitous  
8 networks by permitting them to select the points in an incumbent LEC’s  
9 network at which they wish to deliver traffic. Moreover, because competing  
10 carriers must usually compensate incumbent LECs for the additional costs  
11 incurred by providing interconnection, competitors have an incentive to make  
12 economically efficient decisions about where to interconnect.” (emphasis  
13 added)  
14  
15 BellSouth’s position on this issue is consistent with the FCC’s Order.  
16  
17 Q. PLEASE COMMENT ON MR. OLSON’S CLAIM, AT PAGE 5, THAT MCI  
18 WORLDCOM HAS THE RIGHT TO DESIGNATE A SINGLE POINT OF  
19 INTERCONNECTION.  
20  
21 A. MCI WorldCom may establish a single point of interconnection for its  
22 originating traffic. MCI WorldCom does not have the right to establish an  
23 interconnection point for BellSouth’s originated traffic. The POI for  
24 BellSouth’s originated traffic is a single point in a local calling area to which  
25 BellSouth will deliver all of its customers’ traffic to the CLEC. The traffic

1 originated by all BellSouth customers in a local calling area would be  
2 transported by BellSouth to a single point in that local calling area at no charge  
3 to the CLEC. Assuming there is more than one wire center in the local calling  
4 area, MCI WorldCom can then pick up all of BellSouth's traffic that originates  
5 in that local calling area at a single point rather than having to pick up the  
6 traffic at each individual wire center.

7

8 Q. ON PAGES 11-12, MR. OLSON CITES THE JUNE 21, 2000 FCC ORDER  
9 IN THE TSR WIRELESS COMPLAINT CASE AGAINST US WEST AS  
10 EVIDENCE THAT "THE LOCAL COMPETITION ORDER REQUIRES A  
11 CARRIER TO PAY THE COST OF FACILITIES USED TO DELIVER  
12 TRAFFIC ORIGINATED BY THAT CARRIER TO THE NETWORK OF  
13 ITS CO-CARRIER, WHO THEN TERMINATES THAT TRAFFIC AND  
14 BILLS THE ORIGINATING CARRIER FOR TERMINATION  
15 COMPENSATION." PLEASE RESPOND.

16

17 A. The case cited by Mr. Olson does not require BellSouth to haul traffic from a  
18 remote local calling area to MCI WorldCom's single point of interface in a  
19 LATA.

20

21 To the contrary, that Order is completely consistent with BellSouth's position  
22 in this case. I am not an attorney, but I do have experience reading and  
23 implementing numerous FCC orders. Based on my experience, it appears that  
24 the FCC determined a couple of things in the TSR Order. First, the FCC  
25 identified the Major Trading Area ("MTA") as the local calling area for

1 telecommunications traffic between a LEC and a CMRS provider as defined in  
2 47 CFR Section 51.701(b)(2). An MTA typically is a large area that may  
3 encompass multiple LATAs, and an MTA often crosses state boundaries. That  
4 really isn't in dispute and wasn't in dispute in the TSR case. Second, the FCC  
5 determined that this rule, when read in conjunction with 47 CFR Section  
6 51.703(b), requires LECs to deliver, without charge, traffic to CMRS providers  
7 anywhere within the local calling area (or MTA) in which the call originated.  
8 This point is very important and the FCC order deserves quoting. The FCC in  
9 the TSR order, at page 22 (paragraph 31), said that local exchange carriers are  
10 required "to deliver, without charge, traffic to CMRS providers anywhere  
11 within the MTA in which the call originated, with the exception of RBOCs...."  
12 (emphasis added) The FCC did not say, in this case, that local exchange  
13 carriers were required to deliver calls to CMRS providers to points outside the  
14 MTA in which the call originated, but rather only had to deliver such traffic at  
15 no charge within the MTA where the call originated.

16  
17 With regard to traffic that originates on the incumbent local exchange carrier's  
18 network, the relevant area in which the traffic must be delivered free of charge  
19 is defined in CFR Section 51.701(b)(1) as the "local service area established by  
20 the state commission." To clarify, Section 51.701(b) provides as follows:

21  
22 (b) Local telecommunications traffic. For purposes of this subpart,  
23 local telecommunications traffic means:  
24 (1) telecommunications traffic between a LEC and a  
25 telecommunications carrier other than a CMRS provider that

1 *originates and terminates within a local service area*  
2 *established by the state commission; or*  
3 *(2) telecommunications traffic between a LEC and a CMRS*  
4 *provider that, at the beginning of the call originates and*  
5 *terminates within the same Major Trading Area, as defined in §*  
6 *24.202(a) of this chapter. ”*

7  
8 Therefore, with regard to LEC to CLEC traffic, BellSouth is not required to  
9 deliver the traffic without charge to MCI WorldCom to any point outside of the  
10 “local service area established by the state commission.” This is entirely  
11 consistent with BellSouth’s position. We are only obligated to deliver local  
12 calls to MCI WorldCom at a point within the local calling area where the call  
13 originates. The portions of the FCC order quoted on pages 11-12 of Mr.  
14 Olson’ testimony must be read in the complete context of this order, which  
15 clearly limits BellSouth’s obligation to deliver traffic to MCI WorldCom at no  
16 charge to only within the local calling area.

17  
18 Q. WHAT DOES BELL SOUTH REQUEST OF THIS AUTHORITY?

19  
20 A. BellSouth simply requests the Authority find that MCI WorldCom is required  
21 to pay for facilities that BellSouth installs on MCI WorldCom’s behalf in order  
22 to extend BellSouth’s local networks to MCI WorldCom.

Q. MR. PRICE, AT PAGE 34, STATES THAT WHEN THE PARTIES HAVE THE NECESSARY MEET POINT BILLING CAPABILITIES FOR TYPE 2A TRAFFIC, BELL SOUTH SHOULD STILL CONTINUE TO PROVIDE THE BILLING FUNCTION IT PROVIDES TODAY. DO YOU AGREE?

A. No. At such time as the parties have the capability to perform meet point billing on wireless Type 2A traffic, then each party should bill for its applicable portion of the call. As stated in my direct testimony, the only reason this has not been done is due to lack of meet point billing capability. BellSouth should not be required to be MCI WorldCom's banker.

Q. DOES BELL SOUTH HAVE PLANS TO IMPLEMENT MEET POINT BILLING WITH WIRELESS CARRIERS?

A. Yes. BellSouth has recently completed development of systems, methods and procedures that will allow Wireless Carriers' Type 2A traffic to participate in meet point billing.

*Issue 40: What is the appropriate definition of internet protocol (IP) and how should outbound voice calls over IP telephony be treated for purposes of reciprocal compensation?*

1 Q. AT PAGE 35, MR. PRICE CRITICIZES BELLSOUTH FOR NOT  
2 DEFINING INTERNET PROTOCOL. DID BELLSOUTH PROVIDE A  
3 DEFINITION OF INTERNET PROTOCOL IN ITS DIRECT TESTIMONY?

4  
5 A. Yes. Briefly, internet protocol, or any other protocol, is an agreed upon set of  
6 technical operating specifications for managing and interconnecting networks.  
7 Internet protocol is the language that gateways use to talk to each other. It has  
8 nothing to do with the transmission medium (wire, fiber, microwave, etc.) that  
9 carries the data packets between gateways. Internet Protocol Telephony, on  
10 the other hand, is telecommunications service that is provided using internet  
11 protocol for one or more segments of the call. Internet Protocol Telephony is,  
12 in very simple and basic terms, a mode or method of completing a telephone  
13 call. In my direct testimony I provide a more detailed explanation of both  
14 Internet Protocol and Internet Protocol Telephony.

15  
16 Q. AT PAGE 36, MR. PRICE SUGGESTS THAT BELLSOUTH TREATS ALL  
17 TRAFFIC UTILIZING INTERNET PROTOCOL AS LONG-DISTANCE. IS  
18 HE CORRECT?

19  
20 A. No. Calls utilizing internet protocol that originate and terminate in the same  
21 local calling area should be treated like any other local call. In its discussion  
22 of this issue, BellSouth is only addressing traffic that is long distance Phone-  
23 to-Phone IP Telephony. Phone-to-Phone IP Telephony is where an end user  
24 customer calls a traditional telephone set, but internet protocol technology is  
25 used in transporting a portion of the call. The customer has no reason to know

1       that internet protocol is even being used. Such calls are telecommunications  
2       services just like calls transported using circuit switching technology.  
3       BellSouth's position is that, if such traffic is truly local in nature, then it would  
4       not be subject to switched access charges. However, applicable switched  
5       access charges should apply to any traditional long distance telephone call  
6       regardless of whether internet protocol is used for a portion of the call.

7

8   Q.   MR. PRICE, AT PAGES 36-38, APPEARS TO MAKE A CASE FOR  
9       PAYING RECIPROCAL COMPENSATION FOR LONG DISTANCE  
10      CALLS USING IP TELEPHONY TECHNOLOGY. PLEASE COMMENT.

11

12  A.   As I stated above, BellSouth does not dispute that calls that originate and  
13      terminate in the local calling area are properly termed local calls, regardless of  
14      the technology employed. However, Mr. Price is addressing long distance  
15      calls for which reciprocal compensation would not apply. The fact that a long  
16      distance call can be made through the use of IP telephony is clear. The FCC  
17      has never exempted such calls from the payment of access charges, as Mr.  
18      Price claims. In fact, the FCC has stated the opposite. The FCC believes such  
19      calls are telecommunications services. Of course, access charges apply to long  
20      distance telecommunications services.

21

22  Q.   AT PAGE 38, MR. PRICE QUOTES THE FCC'S 1998 REPORT TO  
23      CONGRESS IN SUPPORT OF MCI WORLDCOM'S POSITION THAT  
24      SWITCHED ACCESS CHARGES ARE NOT APPROPRIATE FOR CALLS  
25      USING IP TELEPHONY. PLEASE COMMENT.

1

2 A. Mr. Price states that the FCC has not yet made any “definitive  
3 pronouncements” with respect to the treatment of calls using IP Telephony.  
4 However, the FCC’s long-standing rules that define Access Services include  
5 long distance calls made via IP Telephony. As I noted in my direct testimony,  
6 even though IP Telephony and ISP traffic both have the word “Internet” in  
7 their name, they are completely different services and should not be confused.  
8 Contrary to Mr. Price’s claim, the FCC’s April 10, 1998 Report to Congress  
9 states: “The record... suggests... ‘phone-to-phone IP telephony’ services lack  
10 the characteristics that would render them ‘information services’ within the  
11 meaning of the statute, and instead bear the characteristics of  
12 ‘telecommunication services’.” Given this statement by the FCC, it is logical  
13 to expect that the FCC believes that long distance phone-to-phone calls using  
14 IP Telephony are subject to applicable switched access charges.

15

16 Q. WHAT IS YOUR UNDERSTANDING OF THE DISPUTE AT THIS POINT  
17 BETWEEN THE PARTIES?

18

19 A. My understanding, based on the Florida MCI arbitration hearing, is that both  
20 parties agree that long distance calls using IP Telephony are subject to access  
21 charges. However, BellSouth believes that a call that originates and terminates  
22 in different local calling areas is a long distance call. MCI believes that the  
23 NPA/NXX called determines whether a call is long distance.

24

25

1 *Issue 42: Should WorldCom be permitted to route access traffic directly to*  
2 *BellSouth end offices or must it route such traffic to BellSouth's access tandem?*

3

4 Q. PLEASE EXPLAIN THE ISSUE THAT IS IN DISPUTE.

5

6 A. Again, as I explained in my direct testimony, the real issue between the parties  
7 is ensuring the payment of switched access charges. BellSouth's proposed  
8 language in no way affects MCI WorldCom's ability to tandem route traffic or  
9 to provide tandem services.

10

11 Q. DOES THIS ISSUE HAVE ANYTHING TO DO WITH "COMPETITION  
12 FOR TANDEM AND TRANSPORT SERVICES," AS MR. PRICE  
13 ALLEGES AT PAGE 40?

14

15 A. No. BellSouth's ability to properly route and bill switched access traffic  
16 between BellSouth and IXCs is dependent upon established switched access  
17 processes and systems. Further, BellSouth's ability to properly route and bill  
18 switched access traffic between IXCs and Independent Telephone Companies,  
19 other CLECs and Wireless companies subtending BellSouth access tandems  
20 also depends on these switched access processes and systems. If switched  
21 access traffic is not exchanged through the companies' respective access  
22 tandems, but is delivered to BellSouth over local interconnection trunks,  
23 BellSouth is unable to identify and properly bill switched access traffic.

24

25

1 Q. PLEASE RESPOND TO MR. PRICE'S ALLEGATION ON PAGE 40 THAT  
2 BELL SOUTH IS ATTEMPTING TO MONOPOLIZE THE TANDEM  
3 SERVICES BUSINESS.

4  
5 A BellSouth is not seeking to "monopolize the tandem services business," as Mr.  
6 Price claims. In fact, BellSouth's Tennessee Regulatory Authority approved  
7 Intrastate Switched Access Tariff and FCC approved Interstate Switched  
8 Access Tariff provides for a Switched Transport Feature Group D optional  
9 feature entitled Tandem Signaling. This Switched Access Service optional  
10 feature provides for the terms and conditions associated with interconnection  
11 of BellSouth's end offices to *other companies' access tandem switches*. There  
12 are no charges for this service other than a one-time nonrecurring charge to  
13 rearrange existing trunks with the feature.

14  
15 Thus, BellSouth fully embraces competition for tandem services. What  
16 BellSouth does not embrace is MCI WorldCom's attempt to avoid the payment  
17 of access charges by disguising access traffic as local. This Authority should  
18 not order BellSouth to provide local interconnection in a manner that  
19 undermines its ability to provide switched access services for the IXC's  
20 provision of long distance service pursuant to BellSouth's approved tariffs.  
21 Accordingly, the Authority should adopt the language proposed by BellSouth.

22  
23 *Issues 45 and 48: How should third party transit traffic be routed and billed by the*  
24 *parties?*

25

1 Q. IN SUPPORT OF MCI WORLDCOM'S POSITION THAT BELL SOUTH  
2 SHOULD BILL FOR RECIPROCAL COMPENSATION ON THIRD  
3 PARTY TRANSIT TRAFFIC, MR. PRICE STATES, AT PAGE 43, THAT  
4 BELL SOUTH DOES SO TODAY FOR WIRELESS TYPE 1 AND 2A  
5 TRAFFIC. PLEASE COMMENT.

6  
7 A. MCI WorldCom wants BellSouth to pay reciprocal compensation for local  
8 traffic originated from another carrier terminating to MCI WorldCom so MCI  
9 WorldCom does not have to consummate an interconnection agreement with  
10 the originating carrier. However, BellSouth is neither the originating nor the  
11 terminating carrier. When MCI WorldCom is the terminating carrier, MCI  
12 WorldCom should bill its own reciprocal compensation just as any other  
13 wireline carrier would do. MCI WorldCom is simply attempting to shift, to  
14 BellSouth, MCI WorldCom's cost to perform this function. BellSouth should  
15 not be asked to relieve MCI WorldCom of its obligations under the 1996 Act.

16  
17 Under Issue 39 of my direct testimony, I explained in detail the unique  
18 circumstances surrounding Wireless Type 1 and 2A traffic, and I also  
19 explained that the current arrangement is temporary or driven by technical  
20 constraints. Wireless Type 1 traffic is wireless traffic that uses a BellSouth  
21 NXX and, therefore, is indistinguishable from BellSouth-originated or  
22 BellSouth-terminated traffic from a Meet Point Billing perspective. On the  
23 other hand, Type 2A traffic is wireless traffic where the wireless carrier has its  
24 own NXX. Although Type 2A traffic is distinguishable, the necessary system  
25 capabilities required to bill through the Meet Point billing process have only

1 recently become available. Due to these unique circumstances, BellSouth  
2 currently treats such wireless traffic as land-line traffic originated by either the  
3 CLEC or BellSouth. With respect to wireline third-party transit traffic, the  
4 traffic is distinguishable and the billing capabilities are available.

5  
6 Q. HOW DOES MCI WORLDCOM'S CURRENT POSITION COMPARE TO  
7 ITS EARLIER POSITION ON THIS ISSUE?

8  
9 A. In the past, BellSouth did not have the capability to produce the records  
10 necessary to permit MCI WorldCom to bill reciprocal compensation for third-  
11 party transit traffic. MCI WorldCom complained that BellSouth must provide  
12 it with these records so MCI WorldCom could compete. The FCC also stated  
13 that such records should be provided to CLECs; therefore, BellSouth  
14 developed the capability to provide the necessary records. Now, MCI  
15 WorldCom has decided it doesn't want the records after all, but instead wants  
16 BellSouth to do the billing for MCI WorldCom so that MCI WorldCom  
17 doesn't have to incur the billing costs. It would seem that MCI WorldCom is  
18 changing its position to force BellSouth to do whatever is convenient for MCI  
19 WorldCom at the time.

20  
21 *Issue 46: Under what conditions, if any, should the parties be permitted to assign an*  
22 *NPA/NXX code to end users outside the rate center in which the NPA/NXX is*  
23 *homed?*

1 Q. AT PAGE 45, MR. PRICE STATES THAT WHETHER A CALL IS LOCAL  
2 DEPENDS ON THE NPA/NXX DIALED, NOT THE CUSTOMER'S  
3 PHYSICAL LOCATION. DO YOU AGREE?  
4

5 A. No. The determination of whether a call is local or not depends on the  
6 physical location of the calling and called parties. The end points of a call  
7 clearly determine the jurisdiction of the call. This point has been repeatedly  
8 affirmed by the FCC. As I indicated in my direct testimony, traffic completed  
9 to and from numbers assigned in this manner is not local traffic.  
10

11 Q. MR. PRICE REFERENCES BELL SOUTH'S GSST TARIFF REGARDING  
12 FOREIGN EXCHANGE ("FX") SERVICE IN AN ATTEMPT TO SUPPORT  
13 MCI WORLD COM'S POSITION. PLEASE COMMENT.  
14

15 A. BellSouth does not dispute that its FX service, from the end user's perspective,  
16 is exchange service furnished to a subscriber from an exchange other than the  
17 one from which the subscriber would normally be served. However, this end  
18 user perspective definition in no way diminishes the fact that the FX dedicated  
19 facility, paid for by the FX customer, connects the two exchanges together.  
20 The end-to-end service is therefore toll service, just as the name "foreign  
21 exchange service" indicates.  
22

23 Q. IN HIS DISCUSSION OF ISSUE 46, MR. PRICE REFERS TO AN ORDER  
24 BY THE CALIFORNIA COMMISSION. DID THE CALIFORNIA  
25

1 COMMISSION RULE ON THE ISSUE IN DISPUTE BETWEEN THE  
2 PARTIES?

3

4 A. No. The California Commission decided that the ILEC could not restrict the  
5 assignment of the CLEC's NXXs. BellSouth is not attempting to restrict MCI  
6 WorldCom's ability to assign its NXXs. However, regardless of how this issue  
7 is phrased, MCI WorldCom's ability to assign NXX codes is not really what's  
8 in dispute between the parties. The dispute between BellSouth and MCI  
9 WorldCom is actually whether such calls should be treated as local or long  
10 distance for inter-carrier billing purposes. The California Commission did not  
11 decide whether the calls were local or long distance, nor did it decide what  
12 inter-carrier charges should apply. However, the Maine Commission has  
13 decided these issues and determined that the service being provided is  
14 interexchange service. Consequently, access charges, rather than reciprocal  
15 compensation, apply.

16

17 Q. HOW DID THE CALIFORNIA PUC ADDRESS THE ISSUE OF  
18 COMPENSATION FOR SUCH TRAFFIC?

19

20 A. The California PUC addressed end user billing. However, inter-carrier  
21 compensation, not retail end user billing, is the issue here.

22

23 MCI WorldCom failed to point out to the Authority that in Section C. 2,  
24 Intercarrier Compensation, Discussion Section, page 32 of the Order, the  
25 California PUC states:

1           *We conclude that, whatever method is used to provide a local presence*  
2           *in a foreign exchange, a carrier may not avoid responsibility for*  
3           *negotiating reasonable intercarrier compensation for the routing of*  
4           *calls from the foreign exchange merely by redefining the rating*  
5           *designation from toll to local.*

6  
7           *The provision of a local presence using an NXX prefix rated from a*  
8           *foreign exchange may avoid the need for separate dedicated facilities,*  
9           *but does not eliminate the obligations of other carriers to physically*  
10          *route the call so that it reaches its proper destination. A carrier should*  
11          *not be allowed to benefit from the use of other carriers' networks for*  
12          *routing calls to ISPs while avoiding payment of reasonable*  
13          *compensation for the use of those facilities. A carrier remains*  
14          *responsible to negotiate reasonable compensation with other carriers*  
15          *with whom it interconnects for the routing of calls from a foreign*  
16          *exchange.*

17

18          And again on page 36 of the California Order:

19               *We conclude that all carriers are entitled to be fairly compensated for*  
20               *the use of their facilities and related functions performed to deliver*  
21               *calls to their destination, irrespective of how a call is rated based on its*  
22               *NXX prefix.*

23

24          After much consideration on this issue, the California PUC clearly recognized  
25          that the originating carrier should be fairly compensated by the terminating

1 carrier for use of the originating carrier's facilities to deliver such traffic to the  
2 terminating carrier.

3

4 Q. DOES BELLSOUTH PROPOSE TO RESTRICT THE ABILITY OF CLECs  
5 TO ASSIGN NPA/NXX CODES TO CLEC END USERS AS MCI  
6 WORLDCOM CONTENDS?

7

8 A. No. Since I discussed this issue in great detail in my direct testimony, I will  
9 not repeat myself here. The main points to be made here are twofold. First,  
10 BellSouth is not restricting MCI WorldCom's ability to assign NPA/NXXs. It  
11 does not matter to BellSouth if MCI WorldCom gives a telephone number to a  
12 customer who is physically located in a different local calling area than the  
13 local calling area where that NPA/NXX is assigned.

14

15 The second point, and the crux of MCI WorldCom's complaint, is that if MCI  
16 WorldCom gives a number to a customer that is physically located in a  
17 different local calling area from the rate center where the NPA/NXX code for  
18 that number is assigned, reciprocal compensation is not due for calls to that  
19 number. Such calls are long distance service and reciprocal compensation  
20 does not apply to long distance service. Instead appropriate access charges  
21 should apply.

22

23 *Issue 47: Should reciprocal compensation payments be made for ISP bound traffic?*

24

25

1 Q. DO YOU HAVE ANY COMMENTS REGARDING MR. PRICE'S  
2 TESTIMONY ON THIS ISSUE?

3

4 A. Yes. As the Authority is well aware, BellSouth does not agree that ISP-bound  
5 traffic is local traffic subject to reciprocal compensation. I have reviewed Mr.  
6 Price's testimony and find little that I would agree with. Mr. Price has not  
7 provided any evidence that calls to ISPs are local calls. However, BellSouth's  
8 position has not changed with respect to this issue in this proceeding. As I  
9 stated in my direct testimony, BellSouth recognizes that the Authority has  
10 previously ruled on this issue in arbitration proceedings that calls to ISPs are  
11 considered local traffic and are subject to the payment of reciprocal  
12 compensation on an interim basis. In this arbitration proceeding, on an interim  
13 basis, BellSouth is willing to abide by the Authority's previous decisions until  
14 the FCC establishes final rules associated with ISP-bound traffic. In doing so,  
15 BellSouth does not waive its right to seek judicial review on this issue. Upon  
16 establishment of an appropriate inter-carrier compensation mechanism, the  
17 parties would engage in a retroactive true-up based upon the established  
18 mechanism.

19

20 Q. AT PAGE 57, MR. PRICE ENCOURAGES THE AUTHORITY TO  
21 "REQUIRE THAT THE NEW AGREEMENT AFFIRMATIVELY  
22 CONTAIN WORLDCOM'S PROPOSED LANGUAGE WHICH  
23 EXPLICITLY TREATS ISP-BOUND TRAFFIC AS LOCAL TRAFFIC".  
24 PLEASE COMMENT.

25

1 A. The Authority should reject MCI WorldCom's position. As noted above,  
2 BellSouth would agree to continue to operate under the existing terms of the  
3 agreement until the FCC establishes an appropriate inter-carrier compensation  
4 mechanism for ISP bound traffic. MCI WorldCom's position that the  
5 Authority should adopt its language that "explicitly treats ISP-bound traffic as  
6 local traffic" is not appropriate.

7

8 ***Issue 51: Under what circumstances is BellSouth required to pay tandem charges***  
9 ***when WorldCom terminates BellSouth local traffic?***

10

11 Q. HAS MCI WORLDCOM DEMONSTRATED THAT IT IS ENTITLED TO  
12 THE TANDEM INTERCONNECTION RATE?

13

14 A. No. In fact, after reviewing MCI WorldCom's direct testimony, it is even  
15 more clear that MCI WorldCom does not meet the FCC's criteria to be eligible  
16 to receive tandem switching in Tennessee. MCI WorldCom provides no  
17 evidence in this proceeding to demonstrate that its switches either serve a  
18 geographic area comparable to BellSouth's tandem switches or perform  
19 tandem functions. The Authority is apparently expected to take "on faith" the  
20 coverage area and functionality of MCI WorldCom's switches. Lacking such  
21 evidence, the Authority should find that MCI WorldCom is not entitled to  
22 charge BellSouth for tandem switching.

23

24 Q. AT PAGE 59 OF HIS TESTIMONY, MR. PRICE STATES THAT  
25 BELL SOUTH'S POSITION IS THAT "WORLDCOM MAY NOT CHARGE

1 THE TANDEM RATE UNLESS IT USES A TANDEM SWITCH IN THE  
2 SAME NETWORK CONFIGURATION USED BY BELL SOUTH.” IS HE  
3 CORRECT?

4  
5 A. No. It has never been BellSouth’s position that MCI WorldCom must use the  
6 same network configuration as BellSouth. It is, however, BellSouth’s position  
7 that MCI WorldCom should only be compensated for the functions it provides.  
8 If MCI WorldCom’s switch does not provide a tandem function, it does not  
9 meet one of the two criteria established by the FCC for a CLEC to qualify for  
10 tandem switching.

11  
12 The distinguishing feature of a local tandem switch is that it connects one local  
13 trunk to another local trunk. It is an intermediate switch or connection  
14 between the switch serving the originating telephone call location and the  
15 switch serving the final destination of the call. To qualify for payment of  
16 tandem switching under reciprocal compensation, a switch must be performing  
17 this intermediary function for local calls. MCI WorldCom offers no evidence  
18 in this proceeding that its switch performs such a function.

19  
20 MCI WorldCom is seeking to be compensated for functionality it does not  
21 provide. This Authority should deny MCI WorldCom’s request for tandem  
22 switching compensation when it does not demonstrate that its switch performs  
23 those functions.

1 Q. DOES MCI WORLDCOM DEMONSTRATE THE FUNCTIONALITY OF  
2 ITS SWITCHES OR THE AREA IT SERVES IN TENNESSEE?  
3

4 A. No. MCI WorldCom's testimony sheds no light on the presence of, the  
5 functionality of, or the geographic area served by, MCI WorldCom's switches.  
6

7 Q. DO YOU AGREE WITH MR. PRICE'S CLAIM THAT WHEN THE  
8 CLEC'S SWITCH SERVES AN AREA COMPARABLE TO THE AREA  
9 SERVED BY BELL SOUTH'S TANDEM SWITCH THAT THE CLEC  
10 "AUTOMATICALLY IS ENTITLED" TO THE TANDEM  
11 INTERCONNECTION RATE AND THE END OFFICE  
12 INTERCONNECTION RATE?  
13

14 A. No. Clearly, the FCC has a two-part test to determine if a carrier is eligible for  
15 tandem switching; a CLEC's switch must serve the same geographic area as  
16 the ILEC's tandem switch, and a CLEC's switch must perform tandem  
17 switching functions. This is not just BellSouth's view. Courts have found that  
18 the FCC's rule imposes both functionality and geographic requirements. For  
19 example, in a case involving MCI WorldCom (*MCI Telecommunication Corp.*  
20 *v. Illinois Bell Telephone*, 1999 U.S. Dist. LEXIS 11418 (N.D. Ill. June 22,  
21 1999)), the U.S. District Court specifically determined that the test required by  
22 the FCC's rule is a functionality/geography test. In its Order, the Court stated:  
23 *In deciding whether MCI was entitled to the tandem interconnection*  
24 *rate, the ICC applied a test promulgated by the FCC to determine*  
25 *whether MCI's single switch in Bensonville, Illinois, performed*

1                   *functions similar to, and served a geographical area comparable with,*  
2                   *an Ameritech tandem switch.*<sup>9</sup>

3  
4                   <sup>9</sup> *MCI contends the Supreme Court's decision in IUB affects resolution*  
5                   *of the tandem interconnection rate dispute. It does not. IUB upheld the*  
6                   *FCC's pricing regulations, including the 'functionality/geography' test.*  
7                   *119 S. Ct. at 733. MCI admits that the ICC used this test. Pl. Br. At 24.*  
8                   *Nevertheless, in its supplemental brief, MCI recharacterizes its attack*  
9                   *on the ICC decision, contending the ICC applied the wrong test. Pl.*  
10                  *Supp. Br. At 7-8. But there is no real dispute that the ICC applied the*  
11                  *functionality/geography test; the dispute centers around whether the*  
12                  *ICC reached the proper conclusion under that test.*

13  
14 Q.       ON PAGES 62-63 OF MR. PRICE'S TESTIMONY, HE DISCUSSES FCC  
15       RULE 51.711(a) COULD YOU RESPOND TO THIS TESTIMONY?

16  
17 A.       Yes. Mr. Price emphasizes subpart (3) of the rule, but he simply ignores  
18       subpart (1) of the rule. Subpart (1) clearly states that symmetrical rates  
19       assessed by a CLEC upon an ILEC for transport and termination of local traffic  
20       are equal to the rates "that the incumbent LEC assesses upon the other carrier  
21       for the same services." (emphasis added) "Same services" equates to the same  
22       functions that the ILEC performs to transport and terminate the CLEC's  
23       originating local traffic. MCI WorldCom, therefore, is only entitled to impose  
24       tandem switching charges upon BellSouth when MCI WorldCom both: (1)  
25       actually performs the tandem switching function for local calls; and (2)

1 actually serves an area geographically comparable to the area served by  
2 BellSouth's tandem switch to terminate a local call originating from a  
3 BellSouth end user. Similarly, BellSouth may only seek recovery of tandem  
4 switching charges from MCI WorldCom when BellSouth performs the tandem  
5 switching function to terminate a local call originating from an MCI  
6 WorldCom end user.

7  
8 Q. WHAT DOES BELLSOUTH REQUEST OF THE AUTHORITY?

9  
10 A. BellSouth urges the Authority to find that MCI WorldCom has not  
11 demonstrated that its switches perform the same functions as BellSouth's  
12 tandem switches, or serve the same geographic area. Consequently, MCI  
13 WorldCom is not due compensation for the tandem switching element.

14  
15 ***Issue 52: Should BellSouth be required to pay access charges to WorldCom for***  
16 ***non-presubscribed intraLATA toll calls handled by BellSouth?***

17  
18 Q. AT PAGE 46, MR. PRICE STATES THAT BELLSOUTH SHOULD PAY  
19 ACCESS CHARGES TO MCI WORLDCOM WHEN BELLSOUTH IS THE  
20 INTRALATA TOLL CARRIER. PLEASE COMMENT.

21  
22 A. As I understand it, this is only an issue when BellSouth receives the  
23 intraLATA toll revenue for these non-presubscribed calls. Even though  
24 BellSouth receives the intraLATA toll revenue, we have no record to indicate  
25 what call or calls the revenue applies to. A so-called intraLATA call from an

1 independent company ("ICO") to MCI WorldCom may be intraLATA toll or  
2 an extended area call. The ICO has the call record to distinguish the call, but  
3 BellSouth does not. In this instance, MCI WorldCom should go to the ICO to  
4 collect the terminating access it is due. Subsequently, the ICO would bill  
5 BellSouth to recover the access charge it paid to MCI WorldCom.

6

7 ***Issue 94: Should BellSouth be permitted to disconnect service to WorldCom for***  
8 ***nonpayment?***

9

10 Q. ON PAGE 70, MR. PRICE CONTENDS THAT BELLSOUTH SHOULD  
11 NOT HAVE THE LEVERAGE TO DISCONNECT SERVICE. PLEASE  
12 RESPOND.

13

14 BellSouth is within its rights to deny service to customers that fail to pay  
15 undisputed amounts within allowable time frames. MCI WorldCom, like all  
16 other CLECs, should pay its bills on undisputed amounts within the time  
17 period specified in the parties' interconnection agreement. The logical way to  
18 resolve this issue is for MCI WorldCom to pay undisputed amounts within the  
19 applicable time frames, and this portion of the agreement will never become an  
20 issue.

21

22 ***Issue 107: Should the parties be liable in damages, without a liability cap, to one***  
23 ***another for their failure to honor in one or more material respects any one or more***  
24 ***of the material provisions of the interconnection agreements?***

25

1 Q. ON PAGE 77, MR. PRICE CONTENDS THAT THE AUTHORITY  
2 SHOULD ACCEPT MCI WORLDCOM'S LANGUAGE THAT CONTAINS  
3 NO LIMITATION OF LIABILITY FOR MATERIAL BREACHES OF THE  
4 CONTRACT. DO YOU AGREE?

5

6 A. No. There should be a limitation of liability for material breaches of the  
7 parties' interconnection agreement. Absent such a limitation, there is, in  
8 effect, no limitation of liability. Historically, there has been limitation of  
9 liability for services provided to end users. MCI WorldCom's proposed  
10 language would make BellSouth more liable to MCI WorldCom than  
11 BellSouth is liable to its own retail customers by the terms of its tariffs. For  
12 example, if BellSouth were to miss a due date for an MCI WorldCom customer  
13 and that customer claimed that the missed due date caused the customer to lose  
14 a one million dollar sale, then MCI WorldCom's language would attempt to  
15 hold BellSouth liable for that lost sale. As the Authority is aware, BellSouth's  
16 current tariffs limit the liability of such instances.

17

18 *Issue 109: Should BellSouth be required to post on its website all BellSouth's*  
19 *interconnection agreements with third parties within fifteen days of the filing of*  
20 *such agreements with the Authority? Should BellSouth be required to permit*  
21 *WorldCom to substitute more favorable terms and conditions obtained by a third*  
22 *party through negotiation or otherwise, effective as of the date of WorldCom's*  
23 *request?*

24

25

1 Q. ON PAGE 80, MR. PRICE SUGGESTS THAT BELL SOUTH SHOULD BE  
2 REQUIRED TO PROVIDE OTHER PARTIES' AGREEMENTS TO MCI  
3 WORLD COM WITHIN 15 DAYS OF FILING SUCH AGREEMENTS  
4 WITH THE AUTHORITY. DOES BELL SOUTH HAVE SUCH AN  
5 OBLIGATION?

6  
7 A. No. Neither, the 1996 Act or the FCC's rules require BellSouth to provide  
8 CLECs with agreements filed with the state commissions. MCI WorldCom  
9 can get these agreements from the state commissions. In fact, the Authority  
10 posts Tennessee interconnection agreements on its website.

11  
12 Q. SHOULD BELL SOUTH BE REQUIRED TO MAKE SUBSTITUTED  
13 CONTRACT TERMS AND CONDITIONS EFFECTIVE AS OF THE DATE  
14 OF MCI WORLD COM'S REQUEST?

15  
16 A. No. My direct testimony addressed this issue based upon MCI WorldCom's  
17 position, as stated in its petition, that the effective date of the substituted terms  
18 and conditions should be the same as for the third party. Despite MCI  
19 WorldCom's change in position that substituted terms and conditions become  
20 effective upon the date of MCI WorldCom's request, MCI WorldCom's  
21 proposal is still inappropriate. The adoption or substitution of a specific  
22 provision contained in a previously approved agreement is effective on the date  
23 the amendment is signed by BellSouth and MCI WorldCom. BellSouth should  
24 not be required to give MCI WorldCom the benefit of those terms and  
25

1 conditions before such terms and conditions have been incorporated into  
2 BellSouth's agreement with MCI WorldCom.

3

4 Q. DOES THIS COMPLETE YOUR REBUTTAL TESTIMONY?

5

6 A. Yes.

AFFIDAVIT

STATE OF: Georgia  
COUNTY OF: Fulton

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared Cynthia K. Cox – Senior Director – State Regulatory, BellSouth Telecommunications Inc., who, being by me first duly sworn deposed and said that:

She is appearing as a witness before the Tennessee Regulatory Authority in Docket No. 00-00309 on behalf of BellSouth Telecommunications, Inc., and if present before the Authority and duly sworn, her testimony would be set forth in the annexed testimony consisting of 41 pages and 0 exhibit(s).

Cynthia K. Cox

Sworn to and subscribed  
before me on 12.13.00
